Name

Patricia Rivera

Gender

Female

Nationality

Mexican

Emailrivera.perezpatricia@gmail.com**When did or will you finish your PhD?**

September 2019

City, state, and country of residence

Mexico City

University education

Ph.D. in Biological Sciences | Evolutionary plant biology | Biology Institute, National Autonomous University of Mexico (UNAM)| March 2015 to September 2019.
Master in Biological Sciences | Systematics | Biology Institute, National Autonomous University of Mexico (UNAM)| August 2012 to February 2014.
Bachelor in Biology | Plant anatomy and ecology | Sciences Faculty, National Autonomous University of Mexico (UNAM) | August 2005 - November 2010.

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

I have been interested in education for more than ten years since I was finishing my career. First I loved biology so much that I wanted to share that with as many people as possible, then I realized how important is to understand basic science for everyday life from buying meat in the market to realize why coral reefs are important for us and why we have to stop

global warming. I believe that a solid scientific education gives people tools to understand themselves and the world around them, encouraging critical thinking and helping them find new ways to solve their daily problems. I believe education is our most powerful tool to protect wildlife and prevent pollution, and in today's world is the best way to stop misinformation and promote health care and prevention. I would like to join your team because I share with you the passion for teaching science in unconventional ways to make sure students take with them some knowledge but mostly curiosity and love for nature.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

As a student, I worked as mathematics, chemistry, and biology teacher for children from ages 12 to 17. I have experience with personalized courses and large groups (70 students). I have prepared didactic material and practical classes according to the number of students and the resources available. In recent years I have worked for several years as a statistics and plant biology teacher at Mexico's National University.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

In the near future, I picture myself teaching at the university and publishing some of the results from my Ph.D. thesis. I would like to establish collaborations with researchers to study the plant diversity of Mexico and what causes it. In the long-term, I would like to combine my activities as a plant evolution researcher with the formation of human resources. I would like to apply for a position in some university where I could get the opportunity to supervise undergrad and grad students and teach classes on statistics, evolution, and plant biology.
