To: fellows@science-corps.org

Name

Kiah Tasman

Gender

Female

Nationality

British

Emailkiahtasman@live.co.uk**When did or will you finish your PhD?**

13th May 2020

City, state, and country of residence

Bristol, Bristol, UK

University education

PhD, Life Sciences (The effect of pesticides on bumblebee foraging rhythmicity), Pass, University of Bristol, 13/05/2020

BSc, Biology, 2:1, University of Sussex, 08/2014

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

I really enjoyed the teaching and outreach that I got to perform while doing my PhD and would love to get more teaching experience. Biology is a valuable tool for understanding and protecting our natural world and I would love to share the knowledge I have gained on the subject with others. Bees, my speciality, are a particularly easy way of engaging people and providing a portal through which to explore ideas around symbiotic relationships, co-

evolution, agriculture and sustainability. It would also be a chance for me to learn a huge amount, seeing other methods of teaching, exploring ways of communicating ideas, engaging students and developing tools for teaching in different environments.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

Whilst carrying out my PhD I also spent three years as a teaching assistant for the University of Bristol Zoology undergraduate course. I assisted with practicals, field trips, seminars and marking. I also supervised undergraduate and masters dissertation projects, giving me experience in pastoral care and 1 on 1 support. I have also designed and delivered a number of science outreach workshops, including coordinated a 14 person team of scientists for the Greenman Festival, where we ran an interactive tent on pollination, food security and sustainable agriculture (called The Plant Power Station) which attracted 3000 participants. I have also collaborated with local artists to create interactive performances and art exhibitions to explain my research to the public. Alongside this I have also been a STEM ambassador for the last 4 years, attending school events and planning lessons for primary and secondary school children to encourage a more diverse group of children to pursue science. I have also spent a number of field seasons abroad, including 3 months in Trinidad earlier this year, giving me good practice at relocating to a new country, living in remote areas and quickly getting to know a new team.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

I would like to go into academic research and teaching. After my time with the science corps I would like to start a post doc in the area of sustainable agriculture or pollination and take on teaching duties along side this. I would also like to continue the science outreach I have been doing so far, taking workshops and educational games to festivals and schools to teach people about food security and sustainability. The skills that science corps would provide would really help me do this, by helping me develop new ways to engage people in the topics.

CV/Resumé
