To: fellows@science-corps.org

Name

Sara Martín Hernanz

Gender

Female

Nationality

España

Emailsara.martin.hernanz@gmail.com**When did or will you finish your PhD?**

The first of October (2020) I will defense my thesis dissertation

City, state, and country of residence

Sevilla

University education

I have developed a PhD in Biology at the University of Seville (Spain), in which I have reconstruct the evolutionary history of the Palearctic plant genus *Helianthemum* using molecular data (DNA regions, NGS data and microsatellite) as well as environmental and morphological information. I will defense the thesis the first of October (2020). Previous to my PhD, I did the Master Degree in Secondary School Training (Biology and Geology) at the University Autónoma de Madrid (Madrid, Spain; 2015) and the Master degree in Biodiversity and Conservation Biology at the University Pablo de Olavide (Seville, Spain; 2013), after finished a degree in Biology (2012) at University Autónoma de Madrid (Madrid, Spain; 2015).

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

I love science and I love teaching, and I would like to share the knowledge acquired during my academic training with people that really need. I've always had a great vocation for

teaching. However, before I started my professional career as a teacher, I felt the compromise to broaden my knowledge about Biology. Being a teacher implies training the new generations that will work in the future, and therefore an enormous responsibility. Therefore, children and adolescents of today deserve to receive the best training in order to make the world more equitable and sustainable for all, and to expand as much as possible their opportunities to enter the world of work.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

In addition to my studies, I have worked as a teacher in the University during the four PhD years, teaching practical lessons in the laboratory and in the field and organizing seminars related to botany and molecular biology tools to the study of organisms. Furthermore, I have participated in lots of congress as speaker. Lastly, I have worked as a leisure time instructor and as a volunteer in disparate ONGs (teaching dance or as a environmental educator)

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

In two years time, I image myself working as a science teacher in different high schools or universities around the world, getting experience in different modes of education and getting the best in everyone. I see this period of my life as an active learning time. In ten years time, I image myself working as a science teacher in a high school or university of my country but following learning and collaborating with different scientific and teaching projects. I consider that a good teacher is always a student, and I love the idea to study and learn the rest of my life.
