To: fellows@science-corps.org

Name

Ayesha Mobara

Gender

Female

Nationality

South African

Emailayeshamobara@gmail.com**When did or will you finish your PhD?**

On or before the 31 December 2020

City, state, and country of residence

Cape Town, South Africa

University education

Ph.D. | Zoology | University of Cape Town (UCT) | June 2015 - current

M.Sc. | Zoology | University of the Free State (UFS) | 2014

B.Sc. (hons) | Zoology | University of the Free State (UFS) | 2011

B.Sc. | Zoology | University of the Free State (UFS) | 2010

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

In my final year of high school (2004), I was selected as the female representative of South Africa at the International Expo for Young Scientists on Réunion Island. Here, I met international students with science as a common interest. This motivated me to further pursue a career in this discipline. I remain passionately curious and as a result of my studies, I was granted opportunities to explore the earth through microscopes, telescopes, books, and experiments. I was fortunate to meet distinguished individuals and be involved in eye-opening

debates and discussions. As I reach the end of my university career, I wish to inspire the youth to follow a similar path, by igniting their hunger for science, in a creative and professional manner. Being selected as a Science Corps Fellow, will provide a platform where I will be able to share the knowledge, skills and experiences I have gained thus far, to students abroad. Teaching science will be an attempt to improve the social, economic, and environmental well-being of the public community and the natural environment. At the same time, it will be a meaningful experience for me to be able to experience a different country and culture.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

With over a decade of experience as a teaching and laboratory assistant at the University of the Free State (UFS) and the University of Cape Town (UCT), I gained extensive experience in preparing and presenting lectures and assessing outcomes. In 2019, I was selected as to be part of the WWF Environmental Leadership programme. This included an internship, as well as exhaustive workshops where I received training in leadership, financial planning, teamwork, and mental health, amongst other topics. I was also selected as a millennial leader by the Leadership for Conservation in Africa and I am still a member of this organisation. Here, weekly in-depth discussions on current conservation issues take place with members of different backgrounds, professions, and nationalities. By being a part of these organisations, I have been involved in outreach programmes on numerous occasions in the past ten years. I have also volunteered with the Save Our Seas foundation, the Animal Demography Unit (ADU), SAFRING and other organisations, where I was involved in practical research. In my personal capacity, I spend my free time taking part in social beach clean ups, as well as snorkelling, diving, and hiking as a means of exploring the environment.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
Doing science in industry
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

My short-term goal is to share my current skills and knowledge with scholars and undergraduate students, through education, outreach programmes and social media. In the long term, as I continue my research and grow in my career as a postdoctoral fellow and lecturer, I hope to further share that knowledge by mentoring postgraduate students as well. My doctoral study in addition to an internship in a corporate setting (fisheries) made me realise first-hand the significance of doing science in industry. I hope to further my career and do research on this subject. I aspire to learn more and write scientific publications and books on my research in the field of Zoology.

CV/Resumé
