Name

Tomi Lois Olatunji

Gender

Female

Nationality

Nigerian

Emaillois.olatunji@gmail.com**When did or will you finish your PhD?**

September, 2019

City, state, and country of residence

Durban, KwaZulu-Natal, South Africa

University education

PhD Botany : University of Fort Hare, South Africa, September 2019.

MSc. Plant Biology: University of Ilorin, Nigeria, April 2015.

Postgraduate Diploma in Education, Education: National Open University of Nigeria, July 2015.

BSc. Plant Biology: University of Ilorin, Nigeria, July 2011.

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

Science, Technology, Engineering and Mathematics (STEM) is crucial to the sustainable development and stability of any economy. I am a young and passionate female scientist with a great desire to be part of the team to mend the universal gap in STEM particularly in communities with no access to STEM education. I love teaching and inspiring students. Being a science corps fellow would afford me the opportunity to take a break from the rigorous

years of post-graduate study, to give back my acquired knowledge and experience in biological science to the disadvantaged who are lagging in STEM while also developing my teaching skills yet further. I want to look back someday and be glad that I was part of the fellows who impacted the underprivileged to be creative thinkers and innovators.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

I have had excellent opportunities to teach and mentor students with diverse background together and on an individual basis. My teaching experience started as far back as 2014 where I taught agricultural science to high school students. I have also tutored advanced level students in general Biology at Valdymas College of Advanced and Preliminary College in Ilorin, Kwara State, Nigeria in 2016. More recently, I served as a botany tutor and demonstrator to undergraduate students at the University of Fort Hare and University of KwaZulu-Natal, South Africa in 2018 and 2020 respectively. I have also been involved in community development as a volunteer tutor of life and agricultural science of matric students in Keiskamahoeck, a rural community in Eastern Cape province of South Africa. My postgraduate training in Education, ability to teach biology in a simple and clear language, as well as my outgoing and friendly nature allow me to interact well with students and to impact knowledge. I believe these experiences and training will make me an ideal science corps fellow.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

My short-term professional goal is to impact the educationally disadvantaged students by being involved either as a volunteer or paid teacher and mentor in my field of biological sciences, while developing my teaching skills further. My long-term goal is to be a renowned teacher and researcher in my field at the highest academic position while also impacting student's life.

CV/Resumé
