Name

Kris Sales

Gender

Male

Nationality

British

EmailK.Sales@uea.ac.uk**When did or will you finish your PhD?**

Summer 2019

City, state, and country of residence[34 Skoner Road, Norwich, Norfolk, England, NR5 9AX](#)**University education**

ENVEast Doctoral Training Partnership (DTP) PhD. Impacts of heatwaves & thermal variation on insect reproduction? School of Biological Sciences, University of East Anglia (UEA). Jan 2015-July 2019.

Natural Sciences with Integrated Masters (MNatSci) Distinction 74.2±0.5%. School of Natural Sciences, UEA. Sept 2010-July 2014

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

This is a great opportunity for numerous reasons moreover, I feel my motivations and expertise make me an excellent fit with Science Corps's mission.

I am passionate about science communication. I have loved every aspect of designing, delivering, and developing training for short-term stand-alone workshops, lectures, and lessons for 8—21-year olds, across several subjects. However, I aim to broaden and deepen my communication capabilities. Science Corps's opportunity to develop and deliver material for an extended teaching period in a different culture seems perfect.

I am lucky to have studied subjects I am passionate about in higher education (HE). Therefore, I would love to contribute to progressing global STEM education, particularly in underserved demographics. I want to share my science expertise and experiences. Moreover, I hope that my passion for nature, and having come from a family largely outside science and HE, would help subvert science stereotypes and inspire students towards STEM careers.

I have always resided in the UK. So, to develop personally, I want direct experience interacting, and integrating, with locals in a different culture, put my teaching expertise to good use, and gain a deeper world view.

Further application justifications are in the extra comments section.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

Please see CV, and, on request, teaching proof and/or HE academy fellowship application.

During my PhD I specialised in climate change, evolution, thermal biology, sexual selection and sperm competition. However, I am adaptable with a broad education. During my natural sciences degree I elected for: entomology, ageing, behaviour, chemical oceanography, aquatic ecology, field ecology, statistics, parasitism, evolution, taxonomy, earth-science, and sustainability. I have A-level knowledge of biology, geography, chemistry, and maths.

I have formal teacher training including: an undergraduate Science Communication module, a NERC Public Engagement course, Art and Biodiversity Summer School, a Making Sense of Climate Change Denial MOOC and ENVEAST DTP courses like Talking (and Listening) to Diverse Audiences. I also trained in developing Infographics, Apps, Videos, Hackathons and Animations (I co-founded).

Practically, I have experience with undergraduate lecturing (3 modules, 3 years), formative/summative assessments (3 modules, 5 years), laboratory/stats/book seminars (7 modules, 5 years) and 2-week residential field-courses (1 module, 5 years). I have developed, delivered, and trained teachers, for school outreach workshops on behaviour, aquatic ecology, insect diversity and adaptation.

The vast majority of teaching feedback is very positive, with dozens of students and junior colleagues giving thanks, stating I am a role-model, or requested mentorship.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

My primary long-term aim is to be an academic studying behaviour and evolution. In particular, I aim to continue publishing work linking climate change, sexual selection, ageing and entomology using both laboratory and field experiments. Ideally, I would gain a permanent position where I could conduct this research, while engaging with science communication by teaching BSc modules and running outreach related to statistics, behaviour, evolution, field ecology and entomology. I want to develop pedagogical collaborations to compare teaching methods, evaluate our efficaciousness, and publish.

Short term, my fiancé (a post-PhD marine biologist) and I intend to move from Britain and gain experience with post-doctoral positions and fellowships, experiencing different models, topics, approaches and cultures. With the 'two body' academic situation, I am especially keen to develop communication skills for flexibility towards a potential career in school teaching. My PhD supervisor and several friends have said I would fit into it well with my enthusiasm, preparation, mentoring approachability, and inclusiveness.

Therefore, this Science Corps opportunity would be very relevant and fulfilling to my future aims. Developing and delivering teaching to an underserved audience for an extended period would give experiential learning of integrating a deeper world view and improving science communication.

CV/Resumé

How did you find out about Science Corps?

EvoDir

Any extra comment or message.

During October last year (2019), I sent over an application. However, due to logistical problems with my current employment contract I would have been unable to start within the 8-month application window. Despite this Dr Edward M Rubin (MD, PhD, FACMG) emailed me on 6th Nov 2019, mentioning I had a very strong application and hoped that I would reapply when I was closer to the end of my contract (mid-November 2020). After Nov 2020 I would be free to engage with this teaching fellowship, if I am selected.

I believe my motivations and skills would be an asset to Science Corps, and that this is a fantastic personal development opportunity for me. I am happy to travel to any site. I look forward to hearing from you soon.

Thanks
Kris
