To: fellows@science-corps.org

Name

Zolile Maseko

Gender

Male

Nationality

Zimbabwe

Emailzolile.m@zohomail.com**When did or will you finish your PhD?**

2020

City, state, and country of residence

Grahamstown, Eastern Cape, South Africa

University education

PhD| Entomology| Rhodes University| 2020

MSc| Entomology| Rhodes University| 2017

Honours| Forest resources and wildlife management| National University of Science and Technology, Zimbabwe

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

As recent graduate, I am currently exploring ways by which I can put into practise the experiences I have gained during my postgraduate studies. Becoming a Science Corps Fellow will enable me to apply those skills that I have gained. Furthermore, it will be an opportunity for me to inspire upcoming scientists in high schools. By the same breadth, I will also learn how best to communicate my science to the community and learn how to relate to them. I seek to also expand my teaching expertise to more than what I was involved in during

my graduate studies. I believe that this will further enrich my teaching experience as my graduate training was purely research based.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

During my graduate studies, I was a teaching assistant for 2 years teaching first year Zoology. I also got an opportunity to teach statistical programming using R language. I was actively engaged in community engagement, primarily working with high school students in Citizen Science. This was part of high school biology internship for high school students I mentored. I also mentored high school students in their science projects where they competed at national science competitions. I had the honour of mentoring 2 students who got silver and bronze medals at the South African Eskom High School Science Projects.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

In the next 2 years, I aim to further enhance my research skills. In this way I will enhance my scientific method and also science communication skills. Obtaining a fellowship that will allow me to conduct independent and collaborative research will ideally equip me with sufficient skills as I undertake my career. I would like to publish high quality research and enhance my research standing in the scientific community. Long term, in addition to being an accomplished researcher, I also want to venture into teaching as well as training of the next generation of scientists. I further aim to create international connections and collaboration in my line of research.
