Name

Amanda Santos

Gender

Female

Nationality

Brazilian

Emailamandafasan@gmail.com**When did or will you finish your PhD?**

I will finish my PhD on September 2021.

City, state, and country of residence

Jaboticabal, SP, Brasil

University education

PhD | Bio-sciences (subarea: Genetics and Evolutionary Biology) | Universidade Estadual Paulista (UNESP) | September 2021

Master | Genetics (line of research: Animal Genetics and Evolution) | Universidade Estadual Paulista (UNESP) | March 2016

Licentiate | Biology | Universidade Estadual Paulista (UNESP) | December 2014

Bachelor | Biology | Universidade Estadual Paulista (UNESP) | December 2012

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

First, I believe in education as a way of change the world, and in science as the better way of understanding the world. As Science Corps projects join these two fields, I saw an opportunity to contribute to the communities that need more attention and improve my professional career.

Nowadays, we can see a grew of antiscience movements, that rejects even basic issues such as the vaccines and the sphere earth, which can lead us to a lot of problems in a near future. I think that one of the reasons of the grew of these movements is that some non-scientist people don't see the science present on the things of everyday life. One of our most important missions, as scientists, is to show how the scientific capacity can improve the life around the people. So, developing young scientists, that can be local agents of transformation, on the communities is a very important step for a necessary global change.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

On the college, I developed (in 2011 and 2012) a project about "environmental education and human behavior" for students of an elementary school (12/13 years old). I also developed another project called "Club of science" (in 2013), that worked science in a practical way with the students (13 to 15 years old).

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

In the near future I imagine myself teaching genetics and evolution in a good college, and developing a postdoc scientific project.

In the long-term future I imagine myself still teaching genetics and evolution, working as an evolutionary biology researcher in a great University or research Institute, and publishing important papers.

CV/Resumé

How did you find out about Science Corps?

Institutional newsletter

Any extra comment or message.

Desired date of placement: I will be available from November 2021 (my PhD ends on September 2021). As Science Corps is interested in recruiting for fellowships starting within the next year, I can be placed already from January 2022.

Desired location of placement: I would like to be placed in Palampur, India, but I can also be placed in Jagna, Philippines.
