To: fellows@science-corps.org

Name

Anika Neu

Gender

Female

Nationality

German

Emailanika.neu@uni-greifswald.de**When did or will you finish your PhD?**

April 2021

City, state, and country of residence

Berlin, Berlin, Germany

University education

PhD | Spatial Ecology and Evolution | Animal Ecology working group at the University of Greifswald, Germany | May 2017 - expect. April 2021

MSc | Biodiversity, Evolution, Ecology | Free University of Berlin, Germany | October 2014 - December 2016

BSc | Environmental Science | Leuphana University of Lüneburg, Germany | October 2011 - October 2014

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

First of all, my scientific dedication is not limited to- or exclusively motivated by my own

scientific curiosity and career. I am also interested in scientific education. In my opinion, knowledge sharing is one of the most important, if not the most important part in science. Knowledge is known to be the only resource that increases when it is used. However, I feel like this hasn't gained as much consideration as needed and I would be more than happy to contribute in both the knowledge transfer and in helping to promote a scientific and creative way of thinking. Moreover, there should be access to education including higher education which is necessary to promote a career in a scientific field for everyone and everywhere. Obviously, this is not the current situation right now and I am delighted that an organization such as Science Corps exist to help bridge this gap. I am highly motivated by the thought of becoming a Science Corps fellow on my own and sharing my knowledge with both teachers and students, thus making a valuable contribution to the before mentioned issue. Moreover, I expect this experience to shed new perspectives on both sides and to promote connectivity.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

During my PhD studies I was already able to gain valuable teaching experience. This included the supervision of several field courses on the identification of different species groups as part of the Animal Ecology module. Furthermore, I have designed own laboratory experiments for – and supervised the Evolutionary Ecology seminar at the University of Greifswald. In 2019 I had the additional rewarding opportunity to give a course on Species Distribution Modeling (using the software R), which was integrated in the Theoretical Ecology lecture. Moreover, I supervised a Bachelor and a Master student throughout their thesis. All this supervision and teaching experience has filled me with great joy and has enhanced my academic and personal development. Furthermore, I already had the opportunity to give talks at international conferences. In conclusion I am able to present both basic and advanced biological knowledge to a broad audience. I think I will also benefit from the fact that I have already gained some experience abroad. Besides an Au-Pair stay in Southern Spain after I finished Highschool, I travel passionately. It makes me happy to learn more about other cultures and about the things that move people around in the world.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

I very much enjoyed the scientific work over the course of my doctoral thesis and am also aiming for a professional future in (fundamental) research. In the near future I hope to take up a Post-Doc position in a motivated international research group that will allow me to pursue my own scientific ideas. Moreover, I would be very happy to get the opportunity to continue to teach. Recently I reached out to the working group of Lesley Lancaster at the University of Aberdeen (Scotland), who investigates cutting-edge ideas in the field of spatial ecology and evolution. We are currently collaborating in the development of a research proposal to fund a Post-Doc position. In the long term I hope to gain sufficient expertise to establish my own research group that will also be responsible for scientific education at the respective institute.
