To: fellows@science-corps.org

Name

Evelina Blomberg

Gender

Female

Nationality

Swedish

Emailevelinablomberg@hotmail.com**When did or will you finish your PhD?**

June 2021

City, state, and country of residence

Zürich, Switzerland

University education

PhD | Cancer Biology | Laboratory of Molecular Neuro-oncology , University of Zürich |
December 2017 – expected June 2021

Degree of Master of Medical Science | Biomedicine | Karolinska Institute, Sweden |
September 2014 – June 2016

Degree of Bachelor of Medical Science | Biomedicine | Karolinska Institute, Sweden |
September 2011 – June 2014

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

I feel very passionate about the fact that every person has the right to education. Coming from a country that has made great progress in this aspect, where for example all university degrees are free of cost, I still find unjustness in the surrounding circumstances enabling education. Joining Science Corps as a fellow I think would be a great opportunity to put all my

theoretical knowledge into practical work where it's needed the most. To me, it does not make sense that highly educated people in science should stay only within certain countries or social classes.

From a personal point of view, I would like to become a fellow at Science Corps to broaden my scientific horizon and to gain more experience in how to communicate science in an understandable and inspiring way. These qualities I find very important in any scientific career and is something I would like to improve in.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

As a fellow at Science Corp I would like to educate children, but my main goal would be to inspire an interest in science rather than just learning facts. During my five years as a figure skating teacher I could tell the difference if we as a group were having fun instead of just doing one exercise after the other. While having fun the kids would learn exercises without even knowing it.

As a volunteer doing homework with refugee children I had the same experience. One of the main subjects was Swedish. When we would just talk about our interests and life experiences, rather than doing exercises, we would learn grammar, pronunciation etc. without ever feeling like it's boring. As a teacher it requires a bit more of thinking and planning to find ways to learn in a fun and interesting way, but the return when you inspire someone makes it worth it.

Furthermore, I already have experience of living abroad. There are a lot of culture and social aspects to consider. My time in Japan and Switzerland enabled me to easier adapt to new environments and find ways to communicate and understand other people.

Where do you imagine yourself professionally in the future? Check all that apply.

Doing science in industry
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

In the next two years I would like to become a researcher or postdoc at a major pharmaceutical company here in Switzerland. During my PhD I have gotten a taste of what it is like to pursue a longer scientific project. With all the knowledge I have collected so far I would like to put them to the test by doing research in another environment. By leaving academia to work in industry, I would gain knowledge in corporate structures and what it is like to be part of a smaller team that contributes to a bigger project.

Thinking about long term goals, I cannot predict exactly which type of position I will have. What I do know is that I want a job that keeps challenging me and a job where I can inspire and lead others. I've always enjoyed working in a team as I feel that shared responsibility improve creativity and accountability. In the future I would like to lead a interdisciplinary team in which I want to stimulate exchange of knowledge and try to bridge peoples' specialties together. In such a setting I would be particularly interested in bridging scientific knowledge and how to convey it to the public.
