**Name**

Marcos Jiménez Martínez

**Gender**

Male

**Nationality**

Spanish

**Email**[marcosjm23@gmail.com](mailto:marcosjm23@gmail.com)**When did or will you finish your PhD?**

May 2021 (exact date still to be confirmed)

**City, state, and country of residence**

Bonn, Nordrhein-Westfalen, Germany

**University education**

M.A. Education in Secondary Education, Vocational Training and Language Teaching | Social Sciences | Universidad de León (Spain) | 10/2010-09/2011

M.Sc. Geographic Information Systems Management | Geospatial Science | Universitat de Girona (Spain) | 10/2009 – 12/2010

Long Cycle Degree in Geography | Geography | Universidad de León (Spain) | 09/2003 – 09/2010

**What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)**

I am waiting for feedback for the last draft of my dissertation and I will soon defend it, most

likely before June 2021. I have been working for eight years in academy (University of Bonn) and I am looking forward for a totally different professional experience. Moreover, I have been employed by the Center for Development Research (ZEF), focused on designing science-based solutions to development issues in the Global South. Specifically, I have participated in the adaptation of a web-based software tool (GISCAME) to simulate landscape change in West African savannas and developed an geospatial analysis solutions with the open-source R platform. This is the perfect opportunity for me to come back to my initial teaching vocation while keeping contact with the Global South.

---

**In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)**

I am a vocational teacher and I have six months of High School teaching in Spain, in the subjects of Geography and World History of the 20th century. During that experience I focused on de-colonization and nation-building processes and facilitated the active research of the students on specific countries in which they were interested. During my Ph.D. I have facilitated expert consultation workshops in Ghana. The Science Corps fellowship will be a great opportunity for me to learn about the educational system and the practice in that Global South. The main reason for me to move out of my professional goal to be a teacher in Spain was the decision of the government in 2012 to stop hiring new teachers for 3 years, due to public budgetary constraints. The GISCAME tool includes 3D visualization capacities and it has already being used in German high schools for students to design and explore the impact of their own land use scenarios, and maybe would be an interesting tool to use in the schools in Philippines or India.

---

**Where do you imagine yourself professionally in the future? Check all that apply.**

Academic scientist in academia  
Doing science in industry  
In science education

---

**Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)**

In the near term I want to earn more professional experience in the Global South, either as a teacher or as a scientist. This will allow me to better learn in real life about contexts that I have been studying in an office in Europe for the last eight years. In the long-term, I want to come back to my country, Spain, and work in an international cooperation organization or in a geospatial information company.
