To: fellows@science-corps.org

Name

Elina Alambriti

Gender

Female

Nationality

Cypriot

Emaile.alambriti17@imperial.ac.uk**When did or will you finish your PhD?**

December 2021

City, state, and country of residence

London, United Kingdom

University education

PhD | Clinical Medicine Research | Imperial College London | 2018-2021

MRes | Biomedical Research | Imperial College London | 2017-2018

BSc | Biomedical Sciences | University of Warwick | 2014-2017

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

I believe that in the past decade the field of science has been "corrupted" by both misinformation and by exclusively awarding scientific grants to researchers that are publishing only in the handful of top journals. Unfortunately, this has negatively impacted the way that the wider public views science as well as the spread of scientific education to people residing in regions that lack access to it. Through this fellowship, I would like to help create the next generation of scientists by exciting students through the wonders of STEM and

designing exciting curricula for students to test basic scientific concepts and thus be captivated by the possibilities that can arise in the scientific field.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

I was recently part of the module at Imperial College London called Change Makers in which we were assigned a group of 10-15 first year undergraduate students and guided them towards exploring the global challenges we are currently facing. Through this module we had weekly online sessions in which both the students as well as we (the co-learners) researched and presented different prevailing global issues and facilitated both the discussion around the topic but also assisted the students with any problems they were facing throughout the module. Additionally, I was a graduate teaching assistant for the academic year 2019-2020 in which I worked alongside teaching fellows to supervise and guide first and second year undergraduate students to ensure safety rules are followed, and report any incidents immediately to teaching fellows in the lab. Also, I was responsible to give practical lab demonstrations to undergraduate students throughout the academic year and I also assisted the students in troubleshooting their experiments mainly in molecular cell biology assays and supported teaching fellows with any ad hoc laboratory work required during the shift.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

Ideally, in the short-term future plans I would like to have implemented scientific outreach by teaching STEM to students in underprivileged areas as well as be part of a team conducting on-site research in East Asia. In these years I would acquire a significant teaching and research skillset through post-doctoral fellowships in order to be able and successfully create my own team of researchers in the future (long-term plan). I am fascinated by the work done in the psychedelic research field and their main research themes on the effect of psychedelics on the brain but also the use of psychedelics for the treatment of mental illnesses. Therefore, by acquiring a solid skillset both through post-doctoral fellowships but also through the scientific outreach programmes, I would like to further advance my academic potential by creating a research group ideally in my home country of Cyprus that focuses on the use of psychedelics as a tool for treating mental illnesses. This would not only revolutionise the pharmaceutical field of medical science, but it will also revolutionise the public's perception on psychedelics and the licensed use of psychedelic care facilities of the future.

CV/Resumé

How did you find out about Science Corps?

Twitter

Any extra comment or message.

My desired date to start the programme would ideally be January 2022 since I will be finishing my PhD experimentation during the month of November 2021. My ideal location would be the CVIF in Philippines or the AST in Morocco.
