Name

Emily Church

Gender

Female

Nationality

American

Emailemmylee425@gmail.com**When did or will you finish your PhD?**

I have already completed all degree requirements and will graduate Spring 2021

City, state, and country of residence

Chicago, IL USA

University education

Ph.D. | Neuroscience | The University of Illinois at Chicago | 2009 - 2021
B.S. | Natural Sciences | The University of Wisconsin - Madison | 2008
B.S. | Kinesiology | The University of Wisconsin - Madison | 2008

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

There is a lot of untapped potential in countries that do not yet have access to quality science education, and I believe my proficiency in designing the classroom experience around validated teaching methods could accomplish a lot of good there. I would love to establish a precedent of scientific teaching based on evidence.

Additionally, I expect to broaden my perspective in ways that can really only be expected from living outside one's home country for an extended period.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

As a graduate student, I co-created a novel course for STEM undergraduates designed to teach critical evaluation of the primary research literature. I read the scientific research on teaching, designed the course in accordance with scientific principles, prepared a teaching guide for co-instructors of the course, and coordinated and co-taught the course. I've also completed a course on Evidence-Based Undergraduate STEM teaching.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

In the near term, I hope to be working as a postdoctoral researcher in neuropsychology, in a U.S. state that allows me to moonlight as a community organizer to get Approval Voting on the ballot at the municipal or state level. The plurality voting method prevalent throughout the U.S. tends to lead to hyperpolarization, which has not been good for science. In contrast, Approval Voting would help to elect consensus-building candidates and provide more political stability.

In the long term, I hope to work in science policy.
