Name

Tianjiao Sun

Gender

Female

Nationality

China

Emailtianjiaosun2014@u.northwestern.edu**When did or will you finish your PhD?**

December 2020

City, state, and country of residence

Rugao, Jiangsu, China

University education

Doctor of Philosophy | Life Sciences | Northwestern University | December 2020
Master of Science | Clinical Investigation | Northwestern University | December 2020
Master of Science | Biology | Illinois Institute of Technology | May 2012
Bachelor of Medicine | Medicine | Shanghai University of Traditional Chinese Medicine | July 2007

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

From a medical school in China to clinical practice, to biomedical research in the United States, I have always maintained my passion for medical and science education. Currently, educational resources are unevenly distributed. From some of the public welfare activities that I pay attention to, I gradually realized that the distribution of educational resources has an important impact on the growth of science and the development of society. Being a

Science Corps fellow is an excellent opportunity for me to achieve self-fulfillment in the field of education, which is socially significant. Also, I have been very interested in education and hope to engage in a career related to science education in the future. Therefore, participating in the Science Corps Fellowship is a great experience to prepare me for my desired career.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

During medical school, I received training in clinical diagnosis and treatment of diseases. During my Ph.D. study, I learned critical thinking and developed the problem-solving ability. In my long-term study, I have carried out many roles of teaching, mentoring, and tutoring students, and I have gained some experience in education. When I was in medical school, I used to work as a tutor for international students and taught them medical courses. When I was a resident physician, I mentored 60 medical interns, training them in clinical operation, improving their doctor-patient communication skills and expanding their knowledge in clinical medicine. During my Ph.D. study, I also worked as a teaching assistant, promoting the in-class discussion, organizing the class materials, and timely and efficient communication with both the professors and the students. Studying abroad for a long time has given me good adaptability. Participating in various social and volunteering activities has also developed my teamwork skills. All these have prepared me for the role of a Science Corps Fellow.

Where do you imagine yourself professionally in the future? Check all that apply.

In science education

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

I have always maintained my passion for medical and science education. During the next two years, I hope to work in the field of science education back in my home country-China. In the beginning, I am planning to teach in a medical school or the department of life science in an institute. As I have gained more experience, I hope to be in a group which can establish a network to expand our science education from the medical schools or science institutes to the underdeveloped areas of China, as there are a large number of areas which are at great shortage of educational resources. Although there are already organizations which are distributing educational resources, including teaching professionals, to these areas, I hope to develop more opportunities for these areas to get in touch with more advanced science. I understand this is a long-term work, but I hope I can make some contribution to it.
