To: fellows@science-corps.org

Name

Mark Sepanski

Gender

Male

Nationality

USA

EmailMark_Sepanski@baylor.edu**When did or will you finish your PhD?**

1994

City, state, and country of residence

Hewitt, TX, USA

University education

Ph.D., Mathematics, MIT, 1994

B.S., Mathematics, Purdue University, 1990

What are your reasons for applying to be a Science Corps Fellow? (max. 200 words)

I am not applying to be a traditional fellow since I graduated many years ago and already am a professor of mathematics at Baylor University. However, a lifetime of experience has given me a deep desire to improve science education in under-resourced areas. I believe that I have unique talents in this area, and am writing to offer my services for consulting, strategy, creative problem solving, and for shorter development and evaluation visits throughout the year.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship (max. 200 words)

I was largely brought to Baylor University to develop their Ph.D. program and have been the Graduate Program Director for over a decade. As a result, I have a great deal of experience with program development and improvement, program evaluation, program finances, curriculum development, recruitment, teacher training, online learning, creative problem solving, administration, motivation, and leadership.

I also have a great deal of international travel experience and a flexible work schedule. Of note, I taught at the developing Northrise University in Zambia in the summer of 2018. This was a transformative experience and required completely reshaping my teaching materials.

I have experience with applying for grants and some experience with shaping governmental and institutional policies is in the realm of mathematics education. In particular, I serve on the Mathematics Advisory Group for Graduate Education with TPSEMath, Transforming Post-Secondary Education in Mathematics, work with the Math Alliance to increase the number of underrepresented doctorates in mathematics, and help with the Baylor McNair Scholars program.

Finally, I enjoy and am good at working with groups. I have a good sense of humor and a strong work ethic. I would love to be of service to Science Corps.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
Administrative role in industry or academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (2 year) and long-term (10 year) future (max. 200 words)

Naturally, see above, I am far along in my career and already deeply engrossed in all of these activities.

How did you find out about Science Corps?

Some other mailing list

Any extra comment or message.

As I have said, I strongly share your vision and believe that I have an extremely rich and useful skill set. In addition, being successful in mathematical research requires constantly approaching problems in creative ways never thought of before. I have decades of experience with this way of thinking and would love to come alongside Science Corps to help.
