

Apply for a Science Corps Fellowship - Entry #234

Name
Marta Paolucci
Email
marta-pao@hotmail.it
Gender
Female
City, state, and country of residence
Zurich, Switzerland
Nationality
Italian
When did or will you finish your PhD?
Spring 2022
University Education
PhD degree in Microbiology and Immunology, University of Zurich. March 2022 (expected). International Master's degree in Neuroscience, University of Trieste. December 2016. Bachelor's degree in Biotechnology, University of Pavia. July 2014.
What are your reasons for applying to be a Science Corps fellow?
I have travelled a lot abroad; experience different cultures and learn new habits has always fascinated me. Travelling allows you sharing different ideas and expanding your mind in directions you did not even know could exist. However, visiting a country in a way a tourist does can have some limitation. Teaching abroad would be the opportunity to overcome these limitations and to deeply appreciate the strength and beauty of cultural differences in a way that would otherwise not be possible. What you get aware of from travelling is that there are some countries in which children are not as lucky as we are. They are born in a context that does not allow them to study, learn and grow in their education. These aspects have enormous consequences and drawbacks on the entire community. Scientific education is a fundamental prerequisite for development and technological progress of a country and a crucial mean to improve the conditions of people's lives. It is an essential vehicle to provide human resource development, modernization and overall progress. Education has the strength of breaking down social barriers and doing something, even small, to work in this direction would be a privilege for me.
In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.
Travelling a lot since I was a kid and in addition, having studied in Zurich, away from my home country in a very international environment has helped me in being able to adapt easily to new and different conditions.

Moreover, during my PhD I had the opportunity to teach for a semester at the University. I did 150 hours of chemistry teaching to bachelor students. This experience helped me to gain some expertise and to face the difficulties one can encounter during a class.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

In science education

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In the close future, I imagine myself doing research. Academia would be my first choice because it would also allow me in the long-term future to enter the science education field, continuing also at the same time to do scientific research. I would be also interested to do something that bridges the worlds of academia and industry to be able to do something in the field of drug discovery. I have always being interested in doing something more translational and clinical-oriented.
