To: ccho@science-corps.org

**Name**

Christine Crute

**Email**[cef39@duke.edu](mailto:cef39@duke.edu)**Gender**

Female

**City, state, and country of residence**

Durham, NC, USA

**Nationality**

United States

**When did or will you finish your PhD?**

May 2022

**University Education**

Ph.D., Environment, Duke University, expected May 2022.

B.S., Environmental Science, George Mason University, 2016.

**What are your reasons for applying to be a Science Corps fellow?**

As a trained environmental toxicologist, I am passionate about the intersection of human health and the environment. I have witnessed firsthand the injustices of environmental pollution and subsequent human exposure and diseases. Too often, people living in developing countries, communities of low socioeconomic status, or those that face discrimination live in environments that contribute to multiple adverse health effects, perpetuating the cycle of unjust suffering. Thus, my overall career goal is to improve global human health through education, science communication, and science-based policy. As education is the first step in any systemic cultural and political change, I am excited by Science Corp's mission to build STEM capacity worldwide through education.

I strongly believe that scientific research doesn't only belong to the higher academic landscape – it is a public good. Scientific education empowers students to grow, build confidence, and become leaders themselves. In the context of my discipline, education enables students to improve the wellbeing of their communities and protect the environment for future generations. I would be honored to serve as a Science Corps Fellow because its mission closely aligns with my personal goals of sharing the education I have received with those who lack access to the same opportunities.

---

**In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.**

Throughout my education, I have pursued both teaching and global opportunities that have prepared me for this Science Corps fellowship. In undergrad, I taught a university freshman course for three years, and I traveled to Peru to teach health and sanitation lessons to indigenous peoples. After graduation, I spent a year working at the National Institutes of Health, where I taught health literacy classes at a local women's shelter. During graduate school, I have designed and instructed a class in global health focused on electronic waste recycling in developing nations. As part of this course, I led a research trip to Shanghai and Taizhou, China, to conduct fieldwork and laboratory studies investigating the maternal and child health effects in these communities. I just completed Duke's yearlong Preparing Future Faculty Fellowship, and I am completing my Certificate in College Teaching. Finally, I am an IMPACTS Fellow, in which I was trained in scientific outreach and education by Morehead Planetarium and Science Center, and I conducted hands-on science workshops at local middle schools. These experiences have developed my skills in STEM education and outreach, and I am confident in my ability to work with students of all ages and educational backgrounds.

---

**Where do you imagine yourself professionally in the future? Check all that apply.**

Administrative role in industry or academia  
In science education  
In science outreach

---

**Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.**

My overall career goal is to work in the science education and communication sector to translate academic research into informal public outreach and formal educational materials. In the immediate years following graduate school, I plan to develop my professional skills in this sector through postdocs or internships in scientific writing (i.e. science magazines, press releases), formal education (i.e. adjunct community college faculty), and/or informal education (government or public outreach events). These opportunities will help me develop writing, speaking, and managerial skills in science communication to prepare me for a long-term career of directing public outreach and communications at an academic, nonprofit, or government institution. In this 10-year plan, I could see myself working on the academic-facing side of science communication, where I would train scientists how to communicate their research and plan projects with community outreach components. On the other hand, I would be happy to work more on the public-facing side of science communication, where my work at a government institution or nonprofit would work towards increasing public scientific literacy, combatting misinformation, and advocating for science-based policy.

**How did you find out about Science Corps?**

University email list

---

**Any other comments/questions?**

My professional portfolio is located at: <https://sites.google.com/view/christinecrute/home>. This includes further information about my teaching experience and abilities, research goals, and science outreach experience. I am most interested and qualified for teaching and designing curriculum for courses in environmental science, environmental health, and biology.
