New Entry: Apply to Become a Science Corps Fellow

Science Corps <eduversumdev@gmail.com>

Wed, Jun 30, 2021 at 12:31 PM

To: ccho@science-corps.org

Name

Vaishnavi Mohana Natarajan

Emailmohana@imcr.uzh.ch**Gender**

Female

City, state, and country of residence

Zurich,Zurich,Switzerland

Nationality

Indian

When did or will you finish your PhD?

December 2021

University Education

Ph.D. in Cancer biology, University of Zurich, Institute of Molecular Cancer Research, Current (12.21)

M.Sc. in Molecular Lifescience, 09.17

B.Tech in Biotechnology, 04.15

What are your reasons for applying to be a Science Corps fellow?

As a final year Ph.D., in the recent times, I have started thinking about the career I would like to pursue based on my drive towards teaching. I have always been intuitively directed with passion towards teaching because of the joy I derive from helping others understand what I have learnt. I have had the opportunity to experience education from different perspectives, a perspective that I gained from graduating in different countries. This experience has given me a unique take on versatile teaching methods to reach young minds, which made me eager to apply these methods on the future generations. I deeply resonated with the aim of the

Science Corps foundation of helping scientists gain global perspective while still gaining a career experience. The goal of the fellowship aligns with my personal views of teaching and hence serves as an opportunity that would lay the foundations for my teaching career whilst giving back to the world.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

A major part of both my master's (Lab tutor and guiding a Bachelor student) and Ph.D. (300+ hours) I have spent on teaching both practical and theoretical knowledge to young researchers. During my time as a doctorate student, I was involved in setting up curriculum for lab-based courses. I also had to create exams to assess the practical skills that the students have learnt over the course and score them too. Apart from my teaching experience, I took up other responsibilities such as building my group's social media (Twitter) presence. I was a member of the organizing committee for International Conference On Bioengineering (ICBE-2013). I assisted in writing a book on Chemical engineering where we tried to simplify the concepts of principles of Chemical engineering for the students. I believe in fun and practical approach towards teaching science. For example, during my under-graduation I was a member of my department's online newsletter where I penned crime fiction for the readers to solve using scientific concepts. My innovative method of teaching science will be an added advantage to make me a great candidate for the Science Corps Fellowship.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
Doing science in industry
Administrative role in industry or academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

As seen from my selections, I am curious about approaching science from different aspects. I can see myself working in the different subsets of scientific profession. In two years, my objective is to gain experience in the scientific discovery in industry and effective scientific communication. In my distant future, I would like to work for the NASA (analysing the Mars samples brought back to earth by the Perseverance rover) or with WHO (crafting public health programmes with my scientific knowledge). Ultimately, I would like to give back to the community through science. My PhD has opened doors to these various possibilities and this fellowship programme would be a step forward to realising these dreams.
