New Entry: Apply to Become a Science Corps Fellow

Science Corps <eduversumdev@gmail.com>

Wed, Jun 30, 2021 at 2:50 PM

To: ccho@science-corps.org

Name

Biswadeep Dhar

Emailbiswadeepdhar@ufl.edu**Gender**

Male

City, state, and country of residence

Gainesville, FL, USA

Nationality

India

When did or will you finish your PhD?

Fall, 2021

University Education

PhD Candidate, Community Health (Expected Graduation : Fall, 2021)
University of Florida, USA

M.Ed. Curriculum & Instruction (2015)
University of Florida, USA

M.S. Biological Sciences (2007)
University of Calcutta, India.

B.S. Honors in Biological Sciences (2005)
University of Calcutta, India.

What are your reasons for applying to be a Science Corps fellow?

My aim is to help students develop an interest in the subject I teach and establish their critical thinking/logical reasoning skills. I believe in collaboration and since I value healthy relationships among each other in class, I wanted to make sure that the students do understand my learning objectives properly and would urge them to ask me as many questions as they want which is one of the best ways to be critical thinkers -to make it work in a bi-directional approach of learning (we all grow together with integrity) and thereby motivating the students and making it more transformative.

I developed passion for teaching and students' professional development, where I took the opportunity in designing a virtual exchange teaching proposal in collaboration with Univ of Florida International Center and UniNorte in Colombia. My goal was to have an international collaboration with UniNorte and help University of Florida students learn the concepts of community health from a cross-cultural perspective. I considered cultural differences between UF and UniNorte as the assets to create inclusivity in my class and this inter-cultural teaching experience promoted me to apply for Science Corps Fellowship with ample opportunities of firsthand mentorship across nations.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

In 2020, I was accepted to serve as a Coach/Mentor for LEADUF program hosted by the University of Florida, where the key function and responsibilities were to provide professional and academic mentoring to the budding scientists (mostly freshmen and sophomores). As a LEADUF Mentor, I encouraged my mentees to use the concept of linking and bridging through which they might gain the ability to link and bridge people., irrespective of culture, color, race, and ethnicity. My satisfaction lies in academics and commitment while providing opportunities and increasing professional development among students which helped me to receive the 'Presidential Service' Award from University of Florida for academic excellence and service to the University of Florida community.

I believe my background as an Asian, first-generation and with diverse experiences (research, teaching, mentoring and service) from India and United States, made my profile unique to have worked in several positions with significant contributions and sharing experiences from a different lens. Since I believe in inclusive leadership, while challenging my own beliefs and by moving out from my comfort zone and get vulnerable by facing new challenges. So, I believe that my experiences have helped to promote inclusivity thereby embracing the differences among people.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

Administrative role in industry or academia

In science education

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

As for short term plan (two year), I would want to see myself getting engaged in postdoctoral opportunities where I would anticipate opportunities to learn more while making impact in research and mentoring. At the same time, I would want to broaden my search for long term plan (ten year) so that I might have solid back up plans if my first preference doesn't end up fruitful. So, in long term, I would certainly want to see myself in academia, where I might have the opportunity to do research, teaching, and academic advising or service. Likewise, I would be interested to hone my skills in teaching and mentoring as well, even if I continue working in postdoctoral research. I wanted to have substantial experience in all aspects of teaching, mentoring and research, while working on my own research agenda for the first two years.

CV/Resume
