New Entry: Apply to Become a Science Corps Fellow

Science Corps <eduversumdev@gmail.com>

Wed, Sep 29, 2021 at 6:46 PM

To: ccho@science-corps.org

Name

Mariana Rius

Emaildrmarianarius@gmail.com**Gender**

Female

City, state, and country of residence

Setauket, NY, US

Nationality

United States

When did or will you finish your PhD?

January 2021

University Education

Ph.D. | Biological Oceanography | 01/2021

B.S. | Marine Biology | 05/2012

What are your reasons for applying to be a Science Corps fellow?

For my entire life, my interest in the sciences has been supported by both of my parents who have PhDs and careers in the sciences. This source of encouragement was a critical component enabling my participation in programs that sparked my focus on studying and conserving marine ecosystems, and further developing myself in this area through learning SCUBA, volunteering on a marine conservation research project in Krabi, Thailand, and ultimately earning a Ph.D. in biological oceanography. I acknowledge, that not all scientifically curious and interested youth may have such a supported path in the sciences and that these limitations are not a product or reflection of their capacity. Rather, bridging access to science education, programs, and opportunities of scientifically interested youth can open a potential

of immense contribution, diversity, and ingenuity in the global advancement of the sciences. I am applying to be a Science Corps to fulfill my dream of providing and being of support, encouragement, and empowerment for young and curious scientists, as well as to discover the limitations of scientific support in other countries and to be exposed to the scientific path of other cultures.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I have been exposed to a wide range of customs and cultures from a multitude of travel experiences, from the small villages of the Fijian islands to the large cities of India. In my work as a volunteer in Thailand, I collaborated with an international team to advance a marine conservation research project. From my experience teaching biology laboratory classes and Spanish language conversation classes, I have discovered the power of believing in and empowering youth. By taking this approach in my mentorship of students and by encouraging and supporting their progress, familiarity and relationship to science, and how they perceive themselves within the realm of science, I have transformed the trajectory of students to attaining higher degrees and continuing their development as scientists. My participation in professional development seminars has expanded my commitment to my word and to fulfilling what I set out to do. I am committed to making a difference in the lives of others and in the relationship others have to science.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach
Other

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In the near future, I imagine I will have gained valuable experience regarding the impediments of science education abroad. I will use this experience to address these issues through the development of or contribution to a non-profit. In the longer term, I will be involved in science outreach or education either through the operation of a non-profit or involvement in an organization committed to the empowerment of youth in the sciences and to expanding accessibility to science, and scientific curiosity and creativity through the breaking down of prejudice around what a scientist looks like and through diversity initiatives and inclusion culture.

CV/Resume
