Name

Adam Poulsen

Emailadam@adampoulsen.co**Gender**

Male

City, state, and country of residence

Sydney, NSW, Australia

Nationality

Australian

When did or will you finish your PhD?

2021, Charles Sturt University, Australia

University Education

I expect to receive my PhD in human-computer interaction before the end of December 2021. Before starting my PhD in 2018, I completed a Bachelor in Computer Science (Honours), which is a 1-year postgraduate research degree here in Australia. Before that, in 2017, I finished my Bachelor in Computer Science. All of my higher education was completed at Charles Sturt University.

What are your reasons for applying to be a Science Corps fellow?

By November 2021, I will have completed my PhD requirements, be awaiting graduation, and be free to pursue volunteer opportunities before moving into academia. At this stage in my life, having been blessed with and taken every opportunity to upskill, I feel strongly motivated to pay it forward. Additionally, I want to continue to learn skills in instruction, communication, and leadership for a future academic career.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I am particularly interested in the Science Corps opportunity in Bohol, Philippines. I lived in the Philippines for a year in 2017-2018, both in Baguio City and Bayambang Pangasinan. I have a great love for the Filipino people and culture. I have limited working proficiency in Tagalog; I can understand more than I can converse but I know the fundamentals. My studies are in robotics and I know that the Philippines has a thriving young robotics community and I feel I can contribute here in particular. In my research, I also work with vulnerable communities and I feel particularly equipped for this kind of volunteer work. My background in computer science has provided me with a wide range of practical computing skills which can easily translate into high school education curricula.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In two years, I expect to be volunteering. Whether through Science Corps or another opportunity, I intend to integrate myself into a community and continue to help to provide community, social, and/or social services to give back for as long as I am useful and it is sustainable. In ten years, I imagine I will be working in academia anywhere my work is valuable.

CV/Resume
