Gender
Female
City, state, and country of residence
Menzah, Tunis, Tunisia
Nationality
Tunisian
When did or will you finish your PhD?
July 2018
University Education
-Degree: Doctor of Philosophy degree (Ph.D.)/Subject: Applied Chemistry-Materials Chemistry/ Institution: National Institute of Applied Sciences and Technology (INSAT),University of Carthage, Tunis/ Graduation date: June 2018.
-Degree: Master of Research degree (MRes)/Subject: Applied Chemistry-Electro-chemistry/ Institution: National Institute of Applied Sciences and Technology (INSAT),University of Carthage, Tunis/ Graduation date: December 2012.
-Degree: Diplôme d'Ingénieur (Dipl. Ing.) (Recognized as Master of Science in Engineering in USA)/Subject: Chemical Engineering-Industrial Chemistry/ Institution: National Institute of Applied Sciences and Technology (INSAT),University of Carthage, Tunis/ Graduation date: March 2011
What are your reasons for applying to be a Science Corps fellow?
I am applying to be a Science Corps fellow to help empower the next generation and help bridge the global gap in STEM educational opportunities, and this can be done by teaching, developping scientific capacity in regions that lack access to STEM education, supporting schools and projects by creating science curricula, hosting workshops, and demonstrating experiments that provide students with hands-on STEM experience. I have been looking for such an opportunity to leverage my experience to teach and inspire students and I randomly found Science Corps fellowship!
In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

From March 2020 to February 2022, I have tried a new experience of teaching Science, Chemistry and Physics in international high schools in Tunisia where I have dealt with middle school and high school students and enjoyed developing their scientific skills and knowledge.

I have been also a mentor within several international programs aimed at supporting and mentoring girls from all over the world to pursue studies in STEM and coding: "1000 Girls 1000 Futures 2018", "GIRLZ, FTW 2018" and "Technovation Challenge 2019 and 2020".

Where do you imagine yourself professionally in the future? Check all that apply.

In science education

In science outreach

Other

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

I have a dream, that I have just been on working recently, that is about bulding my own school, a boarding academy for secondary students in a coastal region in Tunisia called Mahdia, where local students are deprived from full access to STEM education. This boarding academy, in all its academic and social aspects, is going to prepare them to be fully skilled to integrate a demanding social life.

I imagine myself managing the academy, receiving more and more students from the whole country and even neighbouring countries, delivering graduate successful students to college and being able to say MY DREAM CAME TRUE!

CV/Resume

How did you find out about Science Corps?

LinkedIn

Any other comments/questions?

I know of a location that would make a great Science Corps host site, which is "Lycée Pilote Mahdia" (means "Pionner High School of Mahdia" City) in Tunisia, that has a facebook page:

<https://www.facebook.com/profile.php?id=100076431997257>.

It is a concentrated place where to find high school students ready and keen to receive all kind of education.
