

Apply for a Science Corps Fellowship - Entry #914

Name
Carolina Barata
Email
cdcbrb@st-andrews.ac.uk
Gender
Female
City, state, and country of residence
Scotland, UK
Nationality
Portuguese
When did or will you finish your PhD?
June 2022
University Education
PhD Evolutionary Genomics University of St Andrews June 2022 MSc Evolutionary and Developmental Biology University of Lisbon December 2017 MSc Evolutionary Genetics University of Edinburgh November 2016 BSc Biology University of Lisbon July 2014
What are your reasons for applying to be a Science Corps fellow?
I am applying to be a Science Corps fellow because I am passionate about communicating science to young people. I want to share my interest in the natural sciences with others. Coming from a working class background, I believe that we must prioritise science education as a means for young people to understand the world around them and even introduce them to STEM-related career opportunities. A community that is educated in different aspects of the natural sciences is a thriving community.
In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.
During my PhD, I was a demonstrator for several Biology undergraduate modules, which provided me with gain invaluable teaching experience. In addition, I devoted part of my time to organising several conferences and workshops that allow for building networking and communication skills. I was also involved in helping the local postgraduate community with organising local gatherings in order to cultivate a collaborative and engaging environment.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science education
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

For my short-term scientific career, I would be interested in pursuing a postdoctoral researcher position. Ideally, one that would allow me to further develop my teaching and science communication skills. In the long-term future, I see myself as an active member of the academic community. I would pursue research whilst teaching and potentially supervising early career researchers.
