

Apply for a Science Corps Fellowship - Entry #2295

Name
Catherine Kagemann
Email
chk63@cornell.edu
Gender
Female
City, state, and country of residence
Ithaca, NY, US
Nationality
American
When did or will you finish your PhD?
August 2023
University Education
Bachelor of Science from Indiana University in Biology (2017) PhD in Genetics, Genomics, and Development from Cornell University (2023)
What are your reasons for applying to be a Science Corps fellow?
I am applying to be a Science Corps fellow to increase STEM education abroad. Sometimes STEM education can come off as boring or students can be deterred by scientific jargon. Therefore, I believe that it's incredibly important to promote a fun but educational learning environment for students learning STEM and I hope that I can help in this endeavor. As a minority (my mother is Peruvian), I am also very passionate about teaching STEM to diverse communities which makes me think that I would be a great fit as a Science Corps fellow. I did not have strong mentors in STEM until I began my college education, and I would like to be the mentor that I never had to young students. Since I am about to get my PhD in genetics, genomics, and development, I believe that I have the critical thinking skills necessary to design an effective curriculum for students. As I have been in graduate school for 5 years now, I am also incredibly excited to move to a new country and believe this would be a wonderful opportunity for me.
In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.
As a graduate student I have mentored a high school student through a program at Cornell to teach them basic laboratory techniques over the summer. Additionally, I have experience mentoring undergraduate students in our lab. I also helped with the Expanding Horizons program at Cornell for 2 years which is a one day conference for

7th-9th graders to participate in STEM related workshops and activities.

I am also very interested in science communication and participated in an expedition with the program, Adventure Term. During the Adventure Term program I wrote stories and made a podcast about environmental issues along the border of Arizona which increased my scientific communications skills immensely.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

Doing science in industry

In science education

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

I am currently open to many different career paths. I am very interested in science communication and would love to have a job in scientific writing with the goal of increasing science communication. However, I also love doing research and would not be opposed to staying in academy of continuing research in an industry position. My plan is to apply for many positions to see where life takes me in the end, but I know I would be equally happy with wherever I end up.
