

Apply for a Science Corps Fellowship - Entry #1980

Name
Tee Chuanromanee
Email
tchuanromanee@gmail.com
Gender
Other/Prefer Not to Say
City, state, and country of residence
Mishawaka, IN, USA
Nationality
American
When did or will you finish your PhD?
June 2023
University Education
PhD Computer Science University of Notre Dame expected June 2023 MS Computer Science University of Notre Dame December 2021 BS Computer Science Kettering University June 2018
What are your reasons for applying to be a Science Corps fellow?
I have always been passionate about teaching and sharing my love of science with others. This was one of the reasons why I applied to graduate school in the first place. While I no longer aim to stay in academia, teaching is still very fulfilling for me. One of the challenges of transitioning to an industry job is that there are fewer opportunities to teach others directly. Thus, being a Science Corps fellow will allow me to explore my passion for teaching while enriching others' lives. I will be able to communicate my love for the different types of sciences and encourage students to appreciate the beauty of science. Furthermore, living abroad will allow me to grow as a person. As a Thai-American second-generation immigrant, I know the importance of traveling and living in different countries and cultures for expanding one's mind. This will be a valuable experience for me both personally and professionally, and will enhance my interpersonal and soft skills.
In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I have been a tutor for much of my time at my undergraduate institution and have been trained in teaching effectively at both Kettering University and the University of Notre Dame. The subjects I tutored ranged from math to physics to computer science.

In addition to tutoring, I have also taught at a classroom level and have served as a teaching assistant. Because of this, I have experience in mentoring students both professionally and personally.

I have also traveled to multiple countries in North America, Europe, Asia, and Oceania and have lived in different environments. My background as an Asian-American allowed me to look at things from different perspectives and I have experience working with others from different cultural backgrounds. I am also bilingual and pick up new languages fairly easily as I am currently learning Spanish.

Where do you imagine yourself professionally in the future? Check all that apply.

Doing science in industry

In science education

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

I plan to pursue a career in human-computer interaction research. In the near future, this involves finding a job in a research department in a company in industry and doing work that impacts both scientific and organizational knowledge. Concurrently, I also plan to serve as a visiting faculty in an institution for higher education so that I can continue to fulfill my passion for teaching and mentoring. Depending on the specific full-time role at my future company, I would also like to continue publishing my research in collaboration with academia.

In the longer term, I plan to continue this path and pursue a management position in industry, while keeping my connections in academia and education. A management role is appealing to me because I love to mentor and support others. While a management role in industry may involve less research, I believe that by staying in academia I can still pursue my passion for research and teaching.
