

Apply for a Science Corps Fellowship - Entry #2121

Name
Ifeyinwa Obianyo
Email
iiobianyo@gmail.com
Gender
Female
City, state, and country of residence
FCT - Abuja
Nationality
Nigeria
When did or will you finish your PhD?
September 21, 2020
University Education
Doctorate Degree Materials Science and Engineering African University of Science and Technology 06/01/2018 - 21/10/2020
Master's Degree Materials Science and Engineering African University of Science and Technology 01/07/2016 - 09/12/2017
Bachelor's Degree Civil Engineering University of Nigeria Nsukka 05/09/2005 - 04/11/2010
Diploma in Education Mathematics Education National Open University of Nigeria 07/12/2013 - 12/01/2015
What are your reasons for applying to be a Science Corps fellow?
I am applying for Science Corps Fellowship because I have a passion for teaching STEM subjects and inspiring young people to be excited about taking up STEM careers. This position will provide me with the opportunity to contribute to engineering education I have the ability to deliver inspiring, creative, innovative and engaging teachings to different categories of learners. I am highly organized and methodical with a flexible approach to working practices. Also, I am an effective communicator with proficiency in oral and written English. Participating in this 6- month programme will improve my teaching skills while gaining international experience. My

career/professional development (mentoring, networking and leadership) will be refined through exciting training activities provided by the host institution and this will increase my wealth of knowledge in the STEM field. I have gained valuable skills on how to motivate and guide High School students on their career choices. I also have teaching experience in Mathematics and Engineering.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I currently hold a B.Eng. (Civil Engineering), MSc and PhD (Materials Science and Engineering) with a proven track record of quality teaching and research activities Having served as a Facilitator at the Science Outreach Programmes at the African University of Science and Technology Abuja.

I am privileged to acquire teaching skills right from my childhood because I have a mother that is a great teacher. I grew up observing her teach and I began to teach my peers and classmates at age 9 while in primary school. I continued being a tutor to my classmate even during my secondary school (high school) and undergraduate years. I tutored students in Science and engineering subjects which included Mathematics, Physics, Chemistry, Biology and Strength of Materials.

In 2014, I was involved in Teaching Practice as part of the fulfilment of the Post Graduate Diploma in Education. This was carried out in a high school in Abuja where I taught students the subject of mathematics. Part of the skills I acquired included instructing students on the subject of Mathematics, developing lesson plans and lesson notes for teaching, successful management of students in the classroom and preparing them for standardized tests and examinations.

During my graduate studies, I was privileged to work as a Research Assistant and occasionally served as a Teaching Assistant for M.Sc. courses (Mechanical Properties of Materials; Research Methodology and Technical Writing). I discovered that my practical experiences as a Tutor and Teaching Assistant have provided me with extensive skills and perspectives that have been useful in assisting students with their assignments and studies. These experiences have built my confidence and interest in teaching.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

Doing science in industry

In science education

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In the near future, I hope to gain adequate teaching and research skills as a Scientist and Engineer to formulate new perspectives/ideas that will advance science, technology, engineering and mathematics with the aim of passing down knowledge to budding teachers and researchers. I expect to work in an institution that offers a cultivating and inspiring working environment. While maintaining a work-life balance, I expect to explore various opportunities aimed at developing my skills and making a difference in Science, Technology, Engineering and Mathematics (STEM). In the next 5 years, I see myself becoming an expert in the area of experimental and statistical modelling of the mechanical properties of construction materials. In addition to becoming a renowned professor in Engineering, I am committed to building a research team that will attract funding to drive research projects in STEM, have patents, publications, and new products in the market.
