

Apply for a Science Corps Fellowship - Entry #2205

Name
Ilayda Karadag
Email
ilayda.karadag@outlook.com
Gender
Female
City, state, and country of residence
London, United Kingdom
Nationality
British
When did or will you finish your PhD?
Early 2023
University Education
-PhD, Materials Science, University of Oxford, Expected finish Early 2023. -MEng Materials Engineering, University of Exeter, Graduated June 2018
What are your reasons for applying to be a Science Corps fellow?
I'm applying to be a science Corps fellow as I understand the importance of STEM outreach and have a deep passion for it. It is thanks to an outreach event at my school and the enthusiasm and care of my physics teacher that I began to pursue Materials Science, and 10 years on from that day I am still working in a field I love. Ever since starting University back in 2014 I have sought out opportunities for outreach and can't imagine myself ever stopping. As a woman in STEM, roles which allow me to engage with and inspire other girls to follow opportunities in STEM subjects are some of the most gratifying. Now that my PhD is coming to an end, I would love the opportunity to utilise my knowledge and passion for STEM education in helping advance science curriculum in developing communities.
In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.
Throughout my time as an ambassador at both the University of Exeter and the University of Oxford, I've worked at bringing STEM outreach to a large range of age groups, from primary school children to those about to enter university, and different socio-economic groups. I have experience in developing and delivering STEM

workshops/lessons, and critically accessing our outreach efforts and making improvements for future endeavours. Furthermore, working as an ambassador has allowed me to develop great communication, listening and collaboration skills as I have regularly worked as part of a changing team.

As assistant coach for St Catherine's college boat club, I have been able to assess the needs of my athletes to develop and initiate a training program and set attainable objectives and effectively evaluate and revise my program when needed. Furthermore, whilst coaching the novice women, I was able to increase the number of rowers who transitioned to the senior squad, by fostering athlete engagement and providing a positive environment and support on their development journey.

I am confident that I have the skills and experience that you are looking for and am eager to put my abilities to work as a Science Corps fellow.

Where do you imagine yourself professionally in the future? Check all that apply.

In science outreach

Other

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

Even after completing a PhD, I am in no ways done with learning. Although at this present moment I do not intend to pursue a career in academia, I do see myself in a position which regularly requires seeking knowledge.

In the near future, I am hoping to find a position at a consulting firm. However, it is incredibly important to me that I am able to continue my outreach work and therefore this is a factor I am actively looking into when it comes to choosing the positions I apply for.

Once I have gained a wider knowledge and experience in consulting, I see myself focusing my expertise to the biomedical field as this is where my passion lies.

My reluctance to remain in academia stems from my negative experience in the environment. However, I still have hope that taking a step back will help reignite my love for it.
