

Apply for a Science Corps Fellowship - Entry #3193

Name

Marta Paolucci

Email

marta-pao@hotmail.it

Gender

Female

City, state, and country of residence

Zurich, Switzerland

Nationality

Italian

When did or will you finish your PhD?

I had the PhD defence of the 8th of Februaray 2023, I am waiting for the PhD title.

University Education

PhD degree in Microbiology and Immunology, University of Zurich - February 2023

International Master's degree in Neuroscience, University of Trieste - December 2016

Bachelor's degree in Biotechnology, University of Pavia - July 2014

What are your reasons for applying to be a Science Corps fellow?

I have travelled extensively and developed a deep appreciation for different cultures; teaching science abroad would align naturally with my passions. With science education increasingly important, I am excited about the opportunity to share my knowledge and expertise with underserved communities, as this would bring both personal and professional fulfillment. Being a Science Corps fellow would allow me to make a positive impact by inspiring and educating the next generation of scientists while contributing to broader social and economic development goals. Moreover, this role would enable me to

build long-lasting connections and collaborations with colleagues and institutions abroad, further expanding scientific knowledge and capacity. Aside from the importance of science education, serving as a Science Corps fellow would also be transformative for me. It would provide a chance to learn about new cultures and perspectives while refining my teaching skills. I believe that scientific education is a vital component of progress and development in any country, and I would feel privileged to be able to contribute to this goal in any capacity. Through education, we can break down social barriers and create positive change. I would be honored to play a role in this effort as a Science Corps fellow.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

As a frequent traveler since childhood and having studied in Zurich, in a highly international environment, I have developed the ability to adapt easily to new and diverse situations, as well as an open-minded attitude. During my PhD, I also had the opportunity to give numerous presentations at internal meetings and international conferences, as well as to teach a chemistry course for a semester at the university, which involved 150 hours of teaching to undergraduate students. This experience not only allowed me to develop expertise in teaching, but also helped me to overcome the challenges that can arise in a classroom setting. Overall, I believe that my experiences with travel, international education, and teaching have provided me with a unique set of skills and perspectives that would make me a strong candidate for opportunities that involve working in diverse and challenging environments. I am excited to continue expanding my horizons and to make a positive impact through my work.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

In science education

Other

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In the near future, I envision myself pursuing a career in research. I believe academia would be the most suitable avenue for me, as it would provide me with the opportunity to continue conducting scientific research and also allow me to enter the science education field in the long-term future. My passion for science is not only in discovery, but also in sharing knowledge and educating others about the wonders of science. I aspire to contribute to scientific education by teaching and mentoring future scientists. In addition to my interest in research and education, I am also passionate about scientific communication and would be thrilled to have the opportunity to work in scientific journal. With the ever-evolving nature of science, it is crucial to keep the public and scientists informed about new discoveries and advancements. One effective method to achieve this is by sharing science through various means such as scientific journals and other communication platforms. I firmly believe that communicating science in a clear and accessible manner is vital for promoting scientific literacy and encouraging public engagement with science.
