

Apply for a Science Corps Fellowship - Entry #2789

Name

Rahul Solanki

Emailrahulsolanki.work@gmail.com**Gender**

Male

City, state, and country of residence

Cambridge

Nationality

Indian

When did or will you finish your PhD?

United States

University Education

Masters of Science| Data Analytics| Clarkson University | Aug 30, 2020

Master of Engineering| Wireless Communication Sensor and Network| Gujarat Technological University| Jan 24,2017

Bachelors of Engineering | Electronics and Telecommunication | Gujarat Technological University| Jan 24,2014

What are your reasons for applying to be a Science Corps fellow?

In India, Government helped me to pursue studies, which helped to back for my expenses as I come from an economically backward class(Schedule Caste). I got generous scholarship that helped me during my Masters in the United States.

Right now I am working as a Volunteer Data Analyst at StarHouse Inc. I am not earning right now. I might have to take educational loans to cope with my expenses for future education. It would really help if I could get the fellowship help for my Ph.D. application.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

When the COVID pandemic hit, the importance of data in research became even more apparent. During the lockdown, I started looking for remote working options that involved data science. An NGO called the Student of Service (SOS) provided such an opportunity. With SOS, I worked to simplify a complex report so that it is easily understood by different audiences. I began with analyzing the data in Excel, generating pivot charts, and finally presented them in the form of charts. This project refined my presentation and data reporting skills and more importantly, I was able to apply these skills towards helping a community.

Apart from project skills, I am also great at extracurricular activities such as sports. I play badminton professionally and have won several trophies. I have also been qualified to play in Bay State Games.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

Going forward, I see immense value and opportunity in AI and Machine learning research. In the next two years, I see myself working hard toward my Ph.D. in these fields. In the next 10 years, I see myself working on Machine learning models for different healthcare sectors and NGOs. I would like to make an impact, in future I would like to help people with the help of my research and make their easier.
