EDUCATION AND DEGREES

2020: **Master of Science** in Data Analytics, Clarkson University, New York, United States

2016: **Master of Science** in Wireless Communication Signal and Network, Dr. S. & S.S Ghandhy College of Engineering, Gujarat, India.

2013: **Bachelor of Science** in Electronics and Telecommunication, Shri Sad Vidhya Mandal Institute of Technology, Gujarat, India

SKILLS

Language Skills:

Gujarati- Native

English- Excellent

Hindi- Excellent

CURRENT EMPLOYMENT

2021: **Data Analyst**, Star House Inc, Bolingbrook, Illinois, United States

Match and merge multisource data to prepare clean disambiguated analytical data sets. Conduct data analysis in Power BI and generate dashboards that can aid in data interpretation.

Responsible to ensure: Review data elements from potential data sources and make recommendations based on the data. Analyze data and create sales reports for the team.

PREVIOUS WORK EXPERIENCE

2020-2021: **Data Analyst**, Clarkson University, Potsdam, New York, United States

Performed ETL on IMDB Movies database in Studio3T server with the help of python code. Performed SQL queries and MongoDB queries on the same database in studio 3T and phpMyAdmin to check the validity of queries across servers. Evaluated compute time between queries using a CoCalc python shell.

Responsible to ensure: Ensure data quality and integrity in databases by enforcing database constraints and developing robust data validation scripts. Organizing the internal data repository and making sure it's up to date.

The above was achieved through: Meeting twice a week with the Supervisor to take suggestions and discuss future approach. Following a step-by-step approach which involves learning new concepts, planning, testing, and deploying. Performing self-driven research e.g., searching on stack overflow and trying to understand concepts more clearly. Continued effort in trying to make the code more efficient.

2019-2020 **Graduate Assistant**, Clarkson University, Potsdam, New York, United States

Graded Mathematics and Statistics assignments and test papers for undergraduate students. Performed proctoring in examination hall.

2017-2018 **Assistant Technician**, Vimal Telecom, Pardi, Gujarat, India

Diagnose common cell phone repair device hardware and software issues. Continue to learn and update repair knowledge for new devices and phone models. Prioritize workflow and manage time for repair projects.

Communicate technical information in simple terms to customers.

PROEJCT WORKS

-Power BI projects: -

Food Nutrition APP- Currently working on building a food nutrition app, that takes user input and provides necessary output. The Dataset was downloaded from Food Data Central which is an integrated data system that provides expanded nutrient profile data. The project aim is to create an interactive application that provides the user a choice to select what food do they consume and what nutrients they would like to monitor, and that should generate a calorie chart for the user with respect to its inputs. For instance, if a user wants to control its calories intake, he/she can select Protein, Fats and Carbohydrates from the nutrients section for the respective food he/she will consume. This will show the calories for each food item as well as the sum of calories. Alternatively, a second dataset of calorie intake by age was downloaded from U.S Department of Agriculture. Finally, these two datasets when combined may provide insights about healthy diet which a user can follow to limit his calorie intake.

-Superstore Project: - Used a power BI inbuilt dataset to generate insights about the data. The project begun with understanding the dataset and finding the relationships between tables. Later steps included, cleansing data, and thoroughly analyzing it in the power query window. The aim was to get meaningful information from the data, which may help the Store to make wise decisions. The aim was achieved by creating a dashboard in real time, that provides insights about the total Sales, quantity purchased, average number of delivery days, total profit, the total sales by segment, Sales by Market, the top 10 profitable customers, the top 10 loss products and top 5 profit products.

July 2021 - August 2021: Student of Service, San Antonio, Texas, United States

-Volunteering Project -The project aim was to simplify a complex report so that it was easily understood by different audiences. I was provided with data in the form of csv that included data about different schools and districts across San Antonio, Texas. My goal was to help SOS tell the story of how many schools and school districts they serve. The goal was successfully accomplished by analyzing the data in Excel through power query, generating pivot charts, and finally presented them in the form of reports.

-Kaggle Project:

Titanic: **Machine learning from Disaster:**

Two sets of data were provided. Test set and Training set. Training set was used to build the machine learning model and the Test set was used to see how well the data performed on unseen data. The project goal was to use the machine learning model and train it to predict whether each passenger present in the test set survived the sinking of the Titanic or not. The goal was achieved by building a ML model that gives the prediction.

Clarkson University · Potsdam, New York, United States

-“Capstone Project” - This project is Intelligent Job Search. It consisted of scraping job skills with the help of selenium and later using NLP toolkit to tokenize job descriptions from four different websites to identify recurrent keywords. The results were visualized in tableau and stored on a MySQL database.

-“Implementing XOR using Tensor flow”- Gained knowledge about machine learning concepts. Employed simple neural network consisting of a multilayer perceptron with two inputs and one hidden layer to solve the XOR gating problem.

- **“Breast cancer analysis”** - Used SPSS to run PCA on a multivariate breast cancer dataset. Generated correlation matrices in R to evaluate relationships between explanatory variables and breast cancer cases. Compared means of breast cancer cases across continents using ANOVA and Tukey’s post hoc to identify statistically significant difference

Dr. S. & S.S Ghandhy College of Engineering- India, Surat

-Master’s thesis focused on enhancing the performance of Multi-Cell Multi- User Multiple-Input and MultipleOutput communication networks. Successfully reached the conclusion that energy efficiency is better than spectral efficiency. This was achieved by enhancing EE based power for single antenna users and applying it to multiple antenna users. This work played a significant role in driving new research directions in the group.

Shri Sad Vidhya Mandal Institute of Technology· Bharuch, India

-“Accident Alert and Vehicle tracking system”- This work involved combining an ARM7 (LPC2148 Microcontroller), GPS Modem, GSM Module and an accelerometer. The accelerometer was used for detection of accidents. A GSM Modem was used for sending and receiving messages. The GPS Module was used for sending the coordinates for the location of the accident.

BREAKS

-2013-2014 Preparation for GATE (Graduate Aptitude Test in Engineering) to secure an admission in government funded master’s program. Successfully passed the exam and received a government funded seat.

PUBLICATIONS AND CONFERENCES

Published a paper on "Performance Enhancement of Multicell Multiuser MIMO" in International Research Journal of Engineering and Technology (IRJET) Volume 3, Issue 6 June 2016 S.NO: 365.

2019- Attended Summer School on Deep learning, Gdańsk University of Technology, Gdańsk, Poland.
