When did or will you finish your PhD?

NOVEMBER, 2023

University Education

I hold a Master's degree in Geography with a physical geography option from the University of Abomey-Calavi (DGAT/UAC) in Benin and a Master's degree from the African Centre of Excellence on Climate Change, Biodiversity and Sustainable Agriculture. I am currently working on my thesis at WACWISA (Environmental Management and Sustainability) on the topic : Fire, vegetation cover dynamics and climate change in Ghana: case of west gonja, west mamprusi (guinea-savanna) and sene, afram plains (forest-savana mosaic) districts.

What are your reasons for applying to be a Science Corps fellow?

Indeed, having had the opportunity on this innovative opportunity, I want to apply through my present application because I find a perfect match with my expectations, as I perfectly fit in the required fields through my past training and experiences in the areas such as: forestry, Environment management, Climate change, Ecosystem Ecoservices, remote sensing, modelling, land use, education, cocreation approach, human right...

My selection for this programme will allow me to gain enough, also to show my work capacities as well.

I'm creative and passionate about contributing to a just and inclusive world through certain domains as forestry, Environment management, Climate change, Ecosystem Ecoservices, remote sensing, modelling, land use land cover management and others as well that this programme will cover. Proactive, resourceful and energetic, I will be able to find creative solutions, and capable to produce valuable feedbacks and create a strong teamwork. Worked in the past with some NGOs like OXFAM and African Rising, I have a skill of communications and how to work with teams. Thanking you in advance for the attention you will give to my application, please accept, Sir/Madam, the expression of my sincere greetings.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I have worked in associations such as: AfricaTIC-emplois and Africans Rising Benin which are NGOs that fight for the environmental cause, without forgetting OXFAM QUEBEC in BENIN where I was a consultant in the elaboration of the food security programme. Also in firm Carto-SIG-Environment where I worked as a technical assistant in cartography and climate change. I coordinate all the activities of the Health and Culture Department on training on therapeutic plants, environmental management, the fight against STI/HIV/AIDS, sanitation, the writing of monthly reports, the elaboration of programmes in the field of environmental management and protection without forgetting the sensitization on the protection and conservation of cultural heritage. A multidisciplinary scientist, I am a 2019 recipient of the Integrated Research on Disaster Risks (IRDR) Young Scientists Programme on risk management and natural disasters. Currently, I am in the One planet fellowship programme which trains young scientists to tackle climate change. Also, I am currently working to raise awareness of the impact of wildfires on natural resources, not to mention crops, in over 100 communities in Ghana through a research project. I am part of the Tropical Forestry Association, Ghana Chapter.

I am also nominated as GREEN AMBASSADOR FOR CLIMATE IN AFRICA 2020 by Climate Change Africa Opportunities (CCAO) and Climate Ambassador 2021 (Global Youth Climate Network, World Bank).

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

Doing science in industry

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

Professionally, I aspire to work in a research laboratory within an international team of researchers, or/and to create a consultancy firm specialising in applied GIS and remote sensing for climate risk management and natural resource management to both contribute to and mitigate the phenomenon of climate change and food security. As well as training and educating on new technologies in space science

I obviously plan to continue my research after the PhD in applied remote sensing by reconciling climate and plant biodiversity. In addition, a project on agro-forestry systems in Togo is close to my heart as well as an initiative called "Envie SIG". To do this, I count on capacity building and this kind of experience in order to benefit from a lot of experience without forgetting an increased visibility.
