

Apply for a Science Corps Fellowship - Entry #3304

Name

Annina Zoé Lieberherr

Email

annina.lieberherr@chem.ox.ac.uk

Gender

Female

City, state, and country of residence

Oxford, Oxfordshire, United Kingdom

Nationality

Switzerland

When did or will you finish your PhD?

April 2025

University Education

D.Phil. | Theoretical Chemistry | University of Oxford | exp. April 2025

M.Sc. | Interdisciplinary Sciences (Physics, Chemistry) | ETH Zurich | 24.11.2021

B.Sc. | Interdisciplinary Sciences | ETH Zurich | 26.08.2020

What are your reasons for applying to be a Science Corps fellow?

Teaching has been a great passion of mine for a while, and during my doctoral studies I had extracurricular experience in improving access to graduate studies for people from disadvantaged backgrounds. While this was restricted to the UK, it has motivated me to think about scientific education around the world. Science Corps' ambition of building STEM capacity around the world therefore resonates deeply with me. I want to take the opportunity to apply my teaching experience by sharing my expertise with students that would not have the same opportunity without Science Corps.

Being a fellow further offers a unique opportunity to contribute to the teaching materials. Coming from a teaching assistant background, where lecture notes and problem sheets were not written by myself but where I was able to witness what teaching materials students responded to best, I am excited to take on this challenge.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I have been teaching undergraduates since my third semester at ETH Zurich in various courses ranging from inorganic chemistry over physical chemistry and quantum mechanics to numerical methods. At Oxford, I have been teaching tutorials in the first year course "Mathematics for Chemistry". Through these experiences, I have seen a diverse set of students with different backgrounds and abilities, and I enjoy finding different ways to help them work through problem sheets.

I also have moved countries multiple times during my studies and am well prepared for the relocation as a Science Corps fellow.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

Doing science in industry

In science education

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

I very much enjoy doing research, and I want to pursue an academic career in the near term. However, I would like to keep my options open to change to industry or to move toward education in the longer term.

Industry or teaching seems attractive to me because I believe that in the longer term, I will want to settle in one place and I do not think I can necessarily plan my future as much as I would like to if I remain in academia. Many people set themselves a 'deadline' for how long they will pursue academia, and I will do something similar.

I am split between industry and teaching, because I have a passion for both purely doing science as well as teaching, and I would be very happy in either environment.

How did you find out about Science Corps?

University email list

Any other comments/questions?

I would like to start a fellowship around July-August 2025, and am flexible with regards to location, although my first preference would be the Philippines and the second Morocco.

Further, I'm applying for postdoctoral fellowships at the moment, from whom I will hear back around December and January. In case my fellowship application as well as one of the postdoctoral fellowships are successful, I would need to align starting dates carefully and I probably could not confirm a Science Corps start date before I hear back from those fellowships. If this is an issue, please let me know if it would be better for me to apply in a next application cycle.
