

Apply for a Science Corps Fellowship - Entry #3249

Name

Ali Daher

Emailali.daher@exeter.ox.ac.uk**Gender**

Male

City, state, and country of residence

Oxford, UK

Nationality

Jordan

When did or will you finish your PhD?

Around March 2024

University Education

University of Oxford: PhD in biomedical engineering: October 2020-present

University of Cambridge: Summer study abroad 2018.

Massachusetts Institute of Technology: Bachelor's in mechanical and biological engineering (2015-2019).

What are your reasons for applying to be a Science Corps fellow?

Throughout my tutoring and teaching jobs, whether with the university while I was conducting my studies or privately to generate income on the side I have realized that I have a passion for teaching. I like putting my self in the students' shoes, notice where the holes in their understanding are, and try to convey the information in a way that would most resonate with them from an intuitive and fundamental point of understanding. I am also an avid traveller, and I love exploring cultures; having lived in four continents, I am deeply grateful for the perspectives I have attained. It makes one realize how different

cultures could have vastly different opinions and ways of doing things, but ultimately there is not just one right way, because one must always bear in mind the traditional, cultural and historical contexts. I am looking for ways to expand my experiences and involvement with cultures. I reckon the reason I want to apply to be a Science Corps fellow is to be able to fulfill both of my passions while doing a fulfilling and beneficial work in whatever society I would be residing in.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

As part of the MIT international Science and Technology Initiative, I spent the 2016 summer in Morocco, conducting research on the treatment of mercury contaminated water while immersing myself in the culture. I have also conducted a study abroad programme at the University of Cambridge, UK. During my studies, I was involved in various teaching roles, including a TA for the mechanical engineering department at MIT, as well as a graduate tutor at the University of Oxford. In addition, I have extensive experience in private tutoring for various levels, from middle school to high school to undergraduate college levels.

I have also been involved in various cultural and student organizations, including the MIT international student association, MIT Arab student organisation, MIT Delta Psi international coed fraternity, and the Rhodes Trust at the university of Oxford.

Where do you imagine yourself professionally in the future? Check all that apply.

Doing science in industry

In science education

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

I have enjoyed conducting research and adopting my own project to work on for my PhD. It has been very mind stimulating and challenging, especially in a truly multidisciplinary field where I get to learn and apply knowledge from the disciplines of engineering, math, computer science, biology and human physiology. Ultimately, however, I personally have not enjoyed dealing with the bureaucratic, underfunded, publication-driven and isolated nature of academia at the universities. Perhaps this is the reason why I would like to continue doing research in the future, but perhaps in industry rather than being restricted to an academia setting.
