

Apply for a Science Corps Fellowship - Entry #3229

Name

Markus Holzner

Email

mholzner@gmx.net

Gender

Male

City, state, and country of residence

Zurich, Switzerland

Nationality

German

When did or will you finish your PhD?

December 2023

University Education

- Ph.D. | Genetics, Developmental Biology | ETH Zurich | December 2023
- 2nd State Exam | Pharmacy | LMU Munich | September 2019
- M.Sc. | Pharmaceutical Sciences | LMU Munich | April 2019
- B.Sc. | Pharmaceutical Sciences | LMU Munich | September 2016

What are your reasons for applying to be a Science Corps fellow?

My academic journey has ignited an unyielding passion for teaching and a profound desire to make a meaningful impact. Growing up in the heart of Europe, I was fortunate to have access to a wealth of educational opportunities and mentors nurturing my intellectual growth which profoundly shaped my perspective, emphasizing the importance of giving back.

Science Corps' mission resonates deeply with me because it aligns with my core values and aspirations. I am driven by the belief that education is a powerful catalyst for change, transcending borders and disparities. Joining Science Corps, and teaching STEM subjects I aim to channel my passion for teaching into a tangible force for educational equality. I aspire to become a mentor and guide for students and help setting up educational infrastructure. Empowering STEM education will not only enhance students prospects but also contribute to the global pursuit of equality in opportunities.

In this fellowship, I see an opportunity to be an agent of change, a bridge between knowledge and aspiration, and a catalyst for a brighter future. I am ready to embark on this transformative journey, dedicated to share my passion for science with the next generation. In Hong Kong, I embarked on an exciting journey as the first student in my professor's newly opened lab. The context was filled with challenges, as we had to set up the lab from scratch, decide on and managing the installation of equipment, often working closely with Cantonese locals. Taking initiative, I connected with other labs in our institute and even reached out to the prestigious GIBH in China. The result was a collaborative work environment that flourished within just six months. It grew to 6 students and my contributions are published in three papers.

As the curriculum for Biology bachelor's students at ETH underwent changes, a new practical course was essential, focusing on genomic and genetic methods. Collaborating closely with my professor, I defined clear learning objectives. With dedication, I designed a comprehensive three-week course comprising lectures and practical exercises. The outcome was incredibly rewarding. Not only did the students provide excellent feedback, appreciating the individualized approach and effective content delivery, but the course also became the foundation for subsequent iterations, benefiting students year after year.

These experiences have honed my ability to adapt, collaborate, and make a lasting impact – qualities I eagerly bring to the Science Corps fellowship.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

In Hong Kong, I embarked on an exciting journey as the first student in my professor's newly opened lab. The context was filled with challenges, as we had to set up the lab from scratch, decide on and managing the installation of equipment, often working closely with Cantonese locals. Where do you imagine yourself professionally in the future? Check all that apply.

Doing science in industry

Administrative role in industry or academia

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In the coming two years, I envision myself in a dynamic international role that demands a keen understanding of strategy and economics and follows my primary goal to build a robust global business network across industries. I am committed to learning the intricacies of these domains to become a proficient problem solver and an adept decision-maker. Collaborating on cross-cultural projects and deepening my understanding of the economic forces that shape our world, I aim to drive innovative strategies and solutions with a global perspective.

In 10 years, I see myself returning to the pharmaceutical industry, but in a strategic role with a profound impact. Whether it be in portfolio management or in the process of identifying and acquiring new companies for drug development, my mission remains clear: to contribute to ground-breaking advancements in healthcare. This role will be the nexus of research science and economics, translating innovation into tangible treatments that change lives.

Furthermore, I aspire to have a strong university affiliation to share my first-hand knowledge of the dynamic pharmaceutical landscape with the next generation of leaders. My aim is to bridge the gap between academia and industry, empowering students with real-world insights and fostering innovation in pharmaceutical research.
