

Apply for a Science Corps Fellowship - Entry #3310

Name

Jevon Marsh

Emailjevon.marsh@univ.ox.ac.uk**Gender**

Male

City, state, and country of residence

Oxford

Nationality

Canada

When did or will you finish your PhD?

Early 2025

University Education

PhD Chemistry, University of Oxford, UK, 2021 - Present (due to submit in early 2025)*

MSc Chemistry, Queen's University at Kingston, Canada, 2018-2020**

BSc Joint Honours Chemistry and Biochemistry, First Class Standing, Memorial University of Newfoundland, Canada, 2014 - 2018

What are your reasons for applying to be a Science Corps fellow?

The Science Corps fellowship was suggested to me by my department at Oxford due to my unwavering passion for science, education and outreach. Although I have spent a lot of time in research and innovation, the opportunity to share knowledge and inspire young minds in science is an incomparable experience, which is why over the years I have accumulated over a decade of experience in tutoring and mentoring students. This fellowship aligns with my aspirations to work with and inspire young minds around the world, assist in making education more accessible and removing

barriers to quality education for bright young minds, with the added bonus of travelling and getting an opportunity to experience new cultures and traditions.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I have over 10+ years of experience in tutoring around the world, with students of all ages (6-32 years old), in various subjects including chemistry, biology, physics, maths, ESL, psychology, etc. I have ample experience tutoring students that are non-native english speakers, and more recently have worked at The University of Oxford developing a biomedicine/chemistry/biochemistry curriculum for chinese international students.

I am currently developing a chemistry curriculum for a private client in Oxford (aged 9) who is eager to get as more indepth understanding of chemistry and its intersections.

Moreover, as exemplified in my CV, I have an abundance of experience in leadership roles through my independent research fellowships, volunteering and being a board member of various charities and organizations, which positions me well to work as part of a team, bring forward innovative ideas and help establish a welcoming, inclusive and enjoyable working (and learning) environment.

As someone from a low-income background, I have also developed a tutoring program to assist low-income students with STEM subjects, in addition to providing advice for applications to scholarships, financial aid for university and interview practice.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

In science education

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

As I have always been passionate about science and education, my career will inevitably involve teaching (e.g. lecturing in universities) chemistry and medicine; as I am also a medical student in Canada, my career will be a balance of research (and training/ teaching students through academic responsibilities) and clinical practice (with my patients).

In the next two years I will remain a tutor in STEM even when I go back to Canada to complete medical school; in 10 years, I would like to imagine that I am a full-time physician scientist in Canada conducting innovative research, lecturing and hopefully will have a scholarship and/or charity to assist students from low-income backgrounds in getting a quality education and mentorship. As a physician, I know I will also participate in foreign expeditions to lower income countries to provide quality medical care.
