City, state, and country of residence

Den Haag, Netherlands

Nationality

Greek

When did or will you finish your PhD?

n/a

University Education

Master of Science, Didactics in Physics and Educational Technology, Aristotle University of Thessaloniki, 15/07/2022

Bachelor of Science, Pedagogics Special Education, University of Thessaly, 20/07/2020

What are your reasons for applying to be a Science Corps fellow?

I have two callings for my career: special education and science teaching. I am currently working on the first one, and actively looking to expand towards making the second one reality. The root of that is my belief that is very important to cultivate critical thinking and scientific understanding to children from a young age. Having said that, I feel responsible to work towards that end and offer my time and any expertise I have. Collaborating with a school or organization that acknowledges the importance of scientific thinking for a better future, is the best way I can imagine myself making a difference. I would

love to be a fellow with Science Corps and have the opportunity to change how STEM is taught: make it more accessible, more intriguing and target a deeper understanding and interest for students.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I have been a tutor to both primary and junior high school students in the subjects of math, physics, chemistry and biology. So, I have some experience with the difficulties that these subjects can bring to the students.

Regarding the concept of being a fellow, I have volunteered in a hospice in Poland, working alongside professional nurses and caretakers. During that period, I had to follow instructions by local professionals in order to help them achieve the best care for the patients, and I had to overcome the challenges that a language barrier brings.

Lastly, I have organized volunteering projects back in Greece, through the organization "AIESEC", so I have an understanding of what the expectations and rules are when it comes to working in a host country and interacting with the regional leadership of a program.

Where do you imagine yourself professionally in the future? Check all that apply.

In science education

Other

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

As previously mentioned, I have a passion for teaching. In the near future, I would like to be a special education teacher in an international school somewhere in the known world, and run a science club for the students. Long-term, I would like to have gain enough experience in the science teaching sector and create a plan for science teaching from kindergarten all the way to the end of primary school. Of course, there are already curricula in place in most schools, but with enough knowledge and experience, they can be further optimized to achieve better student engagement.

CV/Resume

How did you find out about Science Corps?

A friend or colleague

Any other comments/questions?

I am not a PhD graduate, but my partner (Konstantinos Garyfallogiannis) is. We are applying together for this fellowship, since we learned by Christine Corry that it is possible for me to apply as well.

We are looking forward to your response. Thank you very much for your time!
Have a lovely day ahead!
