

Apply for a Science Corps Fellowship - Entry #3295

Name

Lucia Piro

Emaillucia.piro@usys.ethz.ch**Gender**

Female

City, state, and country of residence

Zurich, Switzerland

Nationality

Italian

When did or will you finish your PhD?

June 2025

University Education

PhD - Plant Molecular Physiology - ETH Zurich, Switzerland (June 2025)

Master degree - Plant Biotechnology - Wageningen University, The Netherlands (October 2020)

Bachelor degree - Biotechnology - University of Milano, Italy (July 2018)

What are your reasons for applying to be a Science Corps fellow?

I want to make a direct impact in the field of education and gain experience outside of Europe. This opportunity would allow me to reflect on the next steps in my career while making a meaningful contribution each day. During my PhD, I thoroughly enjoyed conducting fundamental research, but I realised how crucial human connections are for motivating the research. Helping colleagues and supervising students became a direct source of inspiration for me. I am passionate about teaching and would love to make a meaningful impact on students.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

During my teenage years, I volunteered at the church camp in my village in Italy, assisting with homework and organizing summer activities. Currently, I'm actively involved in volunteering with the scientific staff association at my university, where I focus on projects that have a direct social impact, such as advocating for higher PhD salaries, conducting mental health surveys, and organising evaluations on the teaching load of students.

Where do you imagine yourself professionally in the future? Check all that apply.

Doing science in industry

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In two years, I envision myself working for a company outside of Italy, ideally at the intersection of agriculture and food science. I hope to apply my plant biotechnology background to the development of sustainable meat alternatives. Alternatively, I also dream of working for an NGO like the FAO. Ten years from now, I aspire to return to Italy with a wealth of international experience. While I'm still shaping my exact future, I know that I want to bring back an international perspective that drives innovation and positive change in my country in the field of Plant Biotechnology.
