EDUCATION

DPhil candidate in Materials, University of Oxford 2020 – 2023 (estimated)

- Thesis: the fabrication and characterisation of tri-layer tissue engineering heart valve designs developed using biomaterials including collagen, elastin and hyaluronic acid.
- Given significant autonomy to develop strong self-management, project-management, and time-management skills, leading to early submission.

B.E. in Materials Chemistry, University of Science and Technology Beijing 2016-2020

- Proactively participated in research project since 2nd year, subsequently won Best Poster Award in an exchange academic event hosted by Tohoku University (Japan).
- Satisfyingly (96/100) completed dissertation investigating the water solubility of nitrogen-doped graphene and carbon nanotubes.

Exchange student, National Taiwan University 2019

- Core courses: Organic Chemistry (A⁺) and Polymer Science (A⁻).

RELEVANT EXPERIENCES

Tutor, Mansfield and Queen's College, University of Oxford 2021 – present

- Providing coverage on the polymer component of second-year materials courses, encompassing topics such as selection, synthesis, processing, and end-of-life.
- Delivering revision classes for third-year finalists, focusing on topics of polymer physics, chemistry, and composite materials.

Digital Mentor, UNIQ+, University of Oxford 2021

- Mentoring two talented undergraduates from under-represented groups, who were selected into the UNIQ+ Research Internship programme.
- Providing guidance on top postgraduate school application in relevant field as well as reviewing the application documents and conducting mock interviews.

Assistant lecturer, Study Higher, University of Oxford 2021

- Assisted with class coordination and responsible for addressing inquiries
- Delivered part of the lecture on the importance of critical thinking and effective argumentation in STEM research to year 10-11 students

ADDITIONAL SKILLS

-
- **Language:** Mandarin (native proficiency), English (full professional proficiency)
 - **IT:** Advanced proficiency in Microsoft Office, OriginLab, TA universal Analysis, etc
 - Remarkable ability to perform effectively and efficiently in high-pressure situations
 - Confidence in thriving in environment where requirements of delivery are to be met
 - Exceptional proficiency in time and project management
 - Diligent work ethic coupled with strategic and analytical thinking
 - Passion for problem solving, challenge overcoming, and knowledge acquiring
