

Apply for a Science Corps Fellowship - Entry #3241

Name

Emanuele Piemontese

Emailemanuele.piemontese@gmail.com**Gender**

Male

City, state, and country of residence

Berlin, Berlin, Germany

Nationality

Italian

When did or will you finish your PhD?

2024

University Education

- Ph.D.|Bioorganic Chemistry|Humboldt-Universität zu Berlin (Berlin, Germany)|2024 (expected graduation date)
- Erasmus+ Exchange (during Master)|Pharmacy|University of Eastern Finland - Itä-Suomen yliopisto (Kuopio, Finland)|2017
- Integrated Master*|Pharmaceutical Chemistry and Technology|Università Degli Studi di Firenze(Firenze, Italy)| 2019

*The integrated master's degree was a 5-years program, starting after high school.

What are your reasons for applying to be a Science Corps fellow?

The reasons should be divided into two major categories: what I can offer to the community and what I hope to receive back. I aspire to have a positive impact on the world. That's why my studies align with the UN Sustainable Development Goal (SDG) of "Good health", which I will focus on. But that's not enough. With Science Corps, I could contribute to improving the quality of education and reducing inequalities, two SDGs I'm deeply passionate about.

In the long term, focusing on these can empower individuals to achieve many other goals by promoting critical thinking, research, and growth. I want to share the knowledge I was privileged to receive. I can share my strong passion for science and discovery, inspiring curious minds to pursue research. I would be honoured to contribute to developing a vibrant community and start making the world better doing my part. In exchange, I anticipate exploring a new culture and region, forging lifelong friendships, experiencing scientific and personal growth, creating lasting memories and having personal fulfilment while broadening my world perspective. Science Corps would be an enriching experience that can profoundly shape my future and the future of the people I connect with.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

The most valuable skills for this experience are clear communication (with peers and students), mentoring, presenting, group and crisis handling. I think I developed these skills through the following:

- During high school, I was elected twice as the class representative, and I tutored peers in several subjects.
- As a scientific assistant, I supervised students (1-on-1 and practical courses), assigned them tasks, supervised and corrected exams, and often presented research in written and oral form. As a senior group member, I acquired more responsibility in managing the lab and the group members, training new members and organising activities. And, of course, I improved my research and laboratory skills.
- I strengthened my communication skills in many meetings, networking with other scientists and presenting my work.
- Being the leading curator of a TEDx event allowed me to be responsible for a comprehensive team and to deal with the choice and organisation of the speakers.

Adapting, integrating and thriving in a new environment is also fundamental. Some experiences already brought me outside Italy and my comfort zone:

- Exchange period Finland during winter (5 months).
- Relocation for the doctorate to Germany (4.5 years).
- Extended travelling in Europe, Asia and North America.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia
In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

After (or alternatively to) the ScienceCorps experience, my place is in a research lab, and I want to pursue an academic career. In the PostDoc time, I'd like to work on an applied topic, developing something that could have an impact. My primary interest is peptide science on multiple levels. The most

valuable and concrete application in this field is antimicrobial peptides. In this field, I could conjugate the skills of my Ph.D. to my pharmaceutical background. We are all aware of the considerable problem antibiotic resistance represents, and a significant breakthrough in the field is necessary for our collective good. In parallel, I'd also like to increase my engagement in outreach. I believe science is not only made in the lab; people should know how science could improve their lives and society and that science is for everyone. And I hope ScienceCorps would teach me how I can achieve this better. Planning long term is more challenging, but I see myself as a university professor, mentoring new generations of scientists and researching, focusing on discovering more about our universe and working on fundamental and applied science.

CV/Resume[Emanuele Piemontese Resume.pdf](#)**How did you find out about Science Corps?**

Other

Any other comments/questions?

Ideally, I would be able to start in March/April 2024. Regarding the location, the Philippines would be my first choice, but I'd be open to India and Bangladesh.
