

Apply for a Science Corps Fellowship - Entry #3302

Name

Sofia Beatrice Madsen

Email

sofia.b.madsen@gmail.com

Gender

Female

City, state, and country of residence

Lausanne, Switzerland

Nationality

Swedish

When did or will you finish your PhD?

September 2021

University Education

PhD in Neuroscience, University of Lausanne, Switzerland, June 2017 - September 2021

Master in Biomedicine, Lund University, Sweden, September 2013 - June 2015

Exchange semester, Biomedical Science program, KU Leuven, Belgium, Fall 2014

Bachelor in Biomedicine, Lund University, Sweden, September 2010 - June 2013

What are your reasons for applying to be a Science Corps fellow?

I have, since I finished my masters, reflected a lot over the inequality of the access to education on a global level and the effects it has on society. Especially when it comes to higher education in the STEM fields. I grew up in Sweden, where all levels of education is for free, thus anyone independent of social and financial status can be admitted to university. When I started at university and got exposed to a highly international environment I realised

how privileged I was with how easy it was to access education, and the opportunity to change one owns future. Moreover, the access to education is not only something that has an impact on an individual level, but also on society. The STEM field is one of the major drivers of development with in fields such as health, technology, environment/sustainability and more. I believe that the most efficient and long-term solution to improve development in low- and middle-income countries is to start with making education accessible and affordable for everyone. This will give innovative and driven individuals the tools to not only see the needs and ways to improve their own societies, but they will also have the skills to create solutions. Basically giving them the control of their own future, and not having to rely on the innovation of the established research institutions that mainly localised in northern America, Europe and parts of Asia whom (for understandable reasons) first see to their own needs when investing in research and innovation.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I have supervised 3 students and been an instructor for practical trainings of medicine students during my PhD, and very much enjoyed the teaching aspect of my PhD.

In addition I also trained new colleagues and staff in all of my previous jobs.

Where do you imagine yourself professionally in the future? Check all that apply.

Doing science in industry

In science education

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

As I still love doing research, my short-term goals is to continue working with research and development, innovation and/or clinical research in the industry to gain more experience in how to bring valuable scientific discoveries from the lab bench to patients.

My long term goal is to either transition in to working with global health in organisations like the World Health Organisation, FIND and Doctors Without Borders and used my scientific knowledge and acquired knowledge in the life science/pharmaceutical industry to increase the accessibility of research and public health on a global level. Alternatively, I would like to work with scientific communication.
