

Apply for a Science Corps Fellowship - Entry #3293

Name

Tuhin Bandopadhyay

Emailtuhinb2@illinois.edu**Gender**

Male

City, state, and country of residence

Champaign, Illinois. USA

Nationality

Indian

When did or will you finish your PhD?

August, 2025

University Education

Ph.D., Aerospace Engineering, University of Illinois Urbana-Champaign, August 2025

B.Tech+M.Tech (dual degree), Aerospace Engineering, IIT Kharagpur, India, August, 2020.

What are your reasons for applying to be a Science Corps fellow?

Born in a village in India, I have witnessed the hardships the villagers face in their day-to-day lives due to the lack of modern amenities. Growing up studying at Ramakrishna Mission Narendrapur, IIT Kharagpur, and then at UIUC, and thus being exposed to diverse socio-technical perspectives, I realized the need to utilize scientific innovations for the benefit of society and to cater technological developments towards improving the quality of human life. Being a Science Corps fellow would allow me to impact the lives of young students through my teaching, who will lead the world toward a sustainable future. During my undergraduate study, I felt the need to have more hands-on courses in the curriculum and insights from international

communities. So, as a Science Corps fellow, I will try to design my courses in a way that provides students with more practical exposure. I always promote international collaborations and strive to maintain a multicultural and cross-disciplinary environment. Through the Science Corps fellowship program, I would be able to enrich my experience and contribute substantially to global education.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

Throughout my academic journey, I have actively participated in several research projects covering various aspects of fluid dynamics. These involvements not only enriched my knowledge to tackle complex fluid dynamics problems and prepared me to become an academic researcher, but also provided me the opportunity to lead a team, supervise undergraduate and graduate students, disseminate research findings through conferences and publications, and collaborate with peers from diverse backgrounds- all of which I find immensely fulfilling. Driven by the desire to teach, I also grabbed the opportunity to work as a teaching assistant for the undergraduate course 'Incompressible Flow' at UIUC for three consecutive semesters. In this role, I gained valuable experience in teaching course modules, developing homework assignments, preparing project materials, and creating class demonstration videos for the students. I aspire to become a faculty member in the future. I have received the Mavis future faculty program fellowship at UIUC for 2024-25 academic year, where I would learn and work on various aspects of being a Faculty member.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

In science education

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

To pursue my passion to teach and motivate young students and simultaneously perform cutting-edge research impacting the development of sustainable technologies, I want to become a Professor at IIT in the future. I envision myself working with a team of dedicated graduate students to unravel the mysteries of complex turbulent flows to have more predictive knowledge and applicability. My research would always be driven by the practical applications that would bring about the development of sustainable technologies.
