Female

City, state, and country of residence

Hanover

Nationality

Indian

When did or will you finish your PhD?

May 2025

University Education

Dartmouth College

What are your reasons for applying to be a Science Corps fellow?

I am excited to apply for the Science Corps fellowship as it aligns perfectly with my passion for education, scientific outreach, and community development. My primary motivations for applying are:

Passion for Education and Science Communication: Throughout my academic journey, I have been driven by a deep-seated passion for both learning and teaching. As a Doctor of Philosophy student at Dartmouth College, I have had the opportunity to delve into complex scientific topics and develop a nuanced understanding of various disciplines. This fellowship presents a unique opportunity to share this knowledge and inspire young minds to explore

the wonders of science.

Commitment to Community Service: My experiences working with the Government of India, Lockheed Martin, Sight Machine, Tacit, SAP, and Fidelity have reinforced my belief in the power of community service and the importance of giving back. I am eager to leverage my skills and experiences to make a meaningful impact on underrepresented communities, helping to bridge educational gaps and foster a love for science among students who might not otherwise have access to such opportunities.

Professional and Personal Growth: The Science Corps fellowship represents a unique opportunity for personal and professional growth. By working in diverse environments and engaging with different communities, I hope to gain new perspectives and insights that will enhance my understanding of global educational challenges. This experience will not only enrich my own journey but also enable me to bring innovative teaching methodologies and a renewed sense of purpose back to my academic and professional endeavors.

Advocacy for Diversity and Inclusion in STEM: As someone deeply committed to promoting diversity and inclusion in STEM fields, I am particularly drawn to Science Corps' mission. I believe that fostering diverse perspectives is crucial for driving innovation and solving complex problems. Through this fellowship, I aim to contribute to creating an inclusive environment where students from all backgrounds feel empowered to pursue their interests in science.

Intersection of Science, Policy, and Community Development: My academic and professional interests lie at the intersection of science, policy, and community development. I am particularly interested in how scientific education can drive sustainable development and inform policy decisions. The Science Corps fellowship offers an ideal platform to explore these intersections and work on projects that have a tangible impact on communities.

I am enthusiastic about the possibility of joining Science Corps and contributing to its mission of fostering scientific curiosity and education in underserved communities. I am confident that my background, skills, and passion align well with the goals of the fellowship, and I am eager to embark on this rewarding journey.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

In addition to my studies as a Doctor of Philosophy student at Dartmouth College, several experiences have uniquely prepared me for a Science Corps fellowship. I have worked extensively with diverse organizations such as the Government of India, Lockheed Martin, Sight Machine, Tacit, SAP, and Fidelity. These roles have honed my ability to communicate complex scientific and technological concepts effectively to varied audiences.

My engagement in community service has been equally impactful. I have volunteered as a tutor and mentor in local schools, where I have developed educational programs that simplify challenging scientific principles for young students. These experiences have underscored the importance of

accessibility in education and equipped me with practical teaching skills.

Furthermore, my research in Generative AI, focusing on building custom large-language models, has provided me with cutting-edge knowledge and a deep understanding of innovative scientific methodologies. This technical expertise, combined with my commitment to diversity and inclusion in STEM, positions me well to contribute to Science Corps' mission.

Additionally, my involvement in various outreach initiatives, including organizing science workshops and participating in public health campaigns, has reinforced my dedication to using science for community betterment. These experiences have collectively prepared me to inspire and educate future scientists through the Science Corps fellowship.

Where do you imagine yourself professionally in the future? Check all that apply.

Academic scientist in academia

Doing science in industry

Administrative role in industry or academia

In science education

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In the near future, within the next two years, I envision myself leveraging the experiences and skills gained through the Science Corps fellowship to make impactful contributions in the field of education and scientific outreach. Upon completing the fellowship, I aim to secure a position in academia or a research institute where I can continue to develop and implement innovative educational programs. My goal is to integrate advanced technologies, such as artificial intelligence, into the curriculum to make science more accessible and engaging for students from diverse backgrounds. I also plan to collaborate with policymakers to advocate for educational reforms that emphasize STEM education and inclusivity.

In the long term, over the next ten years, I aspire to establish myself as a leading expert in the intersection of science, education, and policy. I envision holding a dual role as a professor and a policy advisor, where I can influence both academic and governmental spheres. As a professor, I will conduct cutting-edge research in Generative AI and its applications in education while mentoring the next generation of scientists and educators. As a policy advisor, I will work towards creating and implementing policies that promote equitable access to quality STEM education worldwide.

Additionally, I hope to launch a non-profit organization focused on providing science education to underserved communities globally. This organization would offer resources, training, and support to educators, ensuring that all students, regardless of their background, have the opportunity to pursue their scientific interests. Through these efforts, I aim to bridge educational gaps, foster a love for science, and contribute to the development of a more

informed and innovative global society.

Ultimately, my professional journey will be driven by a commitment to using science and education as tools for empowerment and societal advancement. By staying at the forefront of technological advancements and educational practices, I am determined to make a lasting impact on the world of science education and beyond.
