

Apply for a Science Corps Fellowship - Entry #3308

Name

Zulay Rodriguez

Emailzulayrod@umich.edu**Gender**

Female

City, state, and country of residence

Miami

Nationality

Cuban-American

When did or will you finish your PhD?

Anticipating joining a program next fall

University Education

University of Michigan - M.S. Ecology and Evolutionary Biology

Florida State University - B.S. Biology, minor in Chemistry

What are your reasons for applying to be a Science Corps fellow?

As someone with a strong background in biology and a deep commitment to promoting education in STEM, I am eager to contribute to ScienceCorps' mission of building STEM capacity worldwide and empowering the next generation of scientists. As a teacher and ecologist I have a passion for showing students the value of environmental studies and ecological restoration. I want to bring that passion to the next generation of climate change champions and activists. This fellowship offers an incredible opportunity to apply my scientific knowledge and teaching experience to a global context, fostering greater access to STEM education.

In addition to your studies, describe any relevant experiences that have prepared you for a Science Corps fellowship.

I hold a Master's Degree in Ecology and Evolutionary Biology from the University of Michigan, where I gained extensive research experience in biological systems and the importance of science in solving real-world challenges. As a Graduate Student Instructor, I had the opportunity to mentor and teach students, honing my ability to communicate complex scientific concepts in ways that are accessible and engaging. I developed coursework and lectures that not only conveyed key scientific principles but also inspired curiosity and a passion for discovery—qualities I hope to bring to the students and communities I would engage with as a ScienceCorps Fellow.

In addition to my academic qualifications, I have participated in science outreach programs designed to encourage minority participation in STEM fields, including leading workshops at science fairs and serving as a tutor for students from underrepresented backgrounds. These experiences have reinforced my belief that education can be a powerful tool for change, and that fostering scientific literacy is essential for addressing many of the global challenges we face today.

Where do you imagine yourself professionally in the future? Check all that apply.

In science education

In science outreach

Expand on your selection above and describe where you imagine yourself professionally in the near (two year) and long-term (ten year) future.

In the near future I expect to find myself in the midst of a PhD program, possibly online or in person, studying STEM education. I have long term goals of becoming a biology professor that radically changes the lives of as many students as possible for the best.
