

Apply to be a Science Corps Fellow - Entry #3331

Name
Michelle Huang
Email
mhuang6@nd.edu
Gender
Female
Residence: City (State), Country
South Bend (IN), USA
Nationality
USA/Canada
When did you or do you expect to complete your PhD?
May 2025
Please tell us briefly about your university education (institution, city, country, year)
University of Notre Dame Notre Dame IN, USA (Aug 2020-May 2025) - PhD in integrated biomedical sciences Johns Hopkins Bloomberg School of Public Health Baltimore MD, USA (Nov 2017-Dec 2019) - MPH with certificate in tropical medicine University of California San Diego San Diego CA, USA (Sep 2010-Jun 2012) - BA in visual arts, minor in psychology Irvine Valley College Irvine CA, USA (Jul 2009-Jun 2010) - AA in social and behavioral sciences
Why would you like to be a Science Corps Fellow?
My first job as a paramedic was in northern New Mexico, serving rural districts, predominated by Native American reservations. I saw a disproportionate burden of disease and injury, a healthcare system that was not equipped to address the inequity, and realized, very quickly, that my own impacts on population health would be very limited.

So, I went to school for Master of Public Health degree to learn how I could help. From there, I learned more about health disparities and neglected tropical diseases, and decided to pursue a PhD in integrated biomedical sciences, studying vectors of neglected tropical disease.

To me, science has never been the end goal of my pursuits; it has always been a tool. I became a scientist to learn how to eliminate health disparities, to create sustainable outcomes, to build capacity and develop community partnerships, and to help create equity. But in addition to the direct effects of applying scientific knowledge to address complex problems, the process of sharing scientific tools and knowledge is a pathway to creating equity as well. I want to be a Science Corps Fellow because I feel extremely fortunate to have grown up in a community that values and prioritizes STEM, and want to share as much as I can with other young minds who have the potential to make waves and create positive impacts in their communities.

In addition to your studies, please describe any prior experience that may help you as a Science Corps Fellow.

I've worked as a paramedic for several years in rural settings. I've volunteered, worked, studied, and lived abroad. I'm adept at overcoming language barriers, function in low-resource settings, building rapport with communities across diverse cultures, and using creative problem-solving skills to come up with unconventional solutions. I've also taught various courses to various audiences, ranging from EMT skills to physiology to biostatistics.

Where do you imagine yourself professionally in the future? Check all that apply.

Other

Please expand on your selection above and describe where you imagine yourself professionally in the near (~2 year) and long-term (~10 year) future.

In the short term, I would like to acquire more skills, knowledge, and experience to build a strong foundation. This will likely be in the form of a postdoctoral position or research associate. In the long term, I would like to be managing research projects with a humanitarian aid, global health, or sustainability and capacity building NGO.
