

Apply to be a Science Corps Fellow - Entry #3330

Name
FENTAHUN MITKU ABATE
Email
fabate0661@tuskegee.edu
Gender
Male
Residence: City (State), Country
TUSKEGEE
Nationality
Ethiopian
When did you or do you expect to complete your PhD?
May 2028
Please tell us briefly about your university education (institution, city, country, year)
University of Gondar, Gondar, Ethiopia, Doctor of Veterinary Medicine (DVM) from 2011-2017.
University of Gondar, Gondar, Ethiopia, Master of Science (MSc) in Microbiology from 2018-2020.
Tuskegee University, Tuskegee, Alabama, USA, PhD (ongoing).
Why would you like to be a Science Corps Fellow?
Currently pursuing my PhD at Tuskegee University in Alabama state USA, I am excited to use my scientific background and love of teaching to support your mission of advancing STEM literacy in underserved communities. My education has given me a solid foundation in research methodology and scientific principles. But the reason I am especially interested in the Science Corps is that I think everyone should have access to scientific information, regardless of where they live or their background. I have faith in my ability to clearly and concisely explain difficult scientific ideas. Through instruction, curriculum design, and practical demonstrations, I am committed to encouraging students' love of science and giving them the confidence to follow their own scientific interests. I am particularly drawn to Science Corps' emphasis on community engagement and sustainable development. I am excited about the prospect of working collaboratively with local communities to address their specific needs and challenges through science-based solutions. I am confident that my skills and experiences align well with the goals of the Science Corps Fellowship, and I am eager to contribute my expertise to the program.

In addition to your studies, please describe any prior experience that may help you as a Science Corps Fellow.

During my tenure at Debark University, I gained extensive experience in both teaching and leadership roles. For more than four years, I served as an instructor, imparting knowledge and fostering critical thinking skills in students. This experience allowed me to refine my communication abilities and develop effective pedagogical strategies to cater to diverse learning styles.

As the Coordinator of Research and Community Service in the College of Agriculture and Environmental Sciences, I played a pivotal role in promoting and facilitating research activities. This involved managing research grants, organizing workshops, and ensuring that research initiatives aligned with the university's strategic objectives and community needs. This position substantiated my organizational, project management, and collaborative skills. Subsequently, I was appointed Dean of the College of Agriculture and Environmental Sciences, where I provided strategic direction and oversight for all academic and administrative functions. This leadership position required me to effectively manage resources, foster a positive work environment, and champion the college's mission of advancing agricultural and environmental sustainability through education, research, and community engagement.

Where do you imagine yourself professionally in the future? Check all that apply.

- Scientist in academia
- Doing science in industry
- In science education
- In science outreach

Please expand on your selection above and describe where you imagine yourself professionally in the near (~2 year) and long-term (~10 year) future.

My short-term (2-year) goal is to create and execute interactive digital platforms that will increase access to scientific knowledge. This includes developing instructional tools and online resources to clarify complicated scientific concepts for a wide range of people. Collaborating with educational institutions and outreach organizations will allow these resources to be included into programs, increasing science literacy.

In the long run (ten years), I hope to lead a global program that promotes scientific collaboration and knowledge exchange. I intend to develop a forum for scientists, educators, and policymakers to share ideas and practices. Establishing a mentorship program will help young scientists from underrepresented backgrounds by providing tools and advice for STEM careers. The overarching purpose is to establish an inclusive scientific community that tackles global challenges through collaborative innovation.
