

Apply to be a Science Corps Fellow - Entry #3358

Name
Hardeep Singh
Email
hardeep.singh@u.northwestern.edu
Gender
Male
Residence: City (State), Country
Evanston(Illinois), USA
Nationality
Indian
When did you or do you expect to complete your PhD?
2029
Please tell us briefly about your university education (institution, city, country, year)
I did my Undergrad and Masters from UM-DAE Centre for Excellence in Basic Sciences, Mumbai, India in 2021. I am currently doing my PhD in Northwestern University, Evanston, Illinois, USA. I expect to graduate in 2029.
Why would you like to be a Science Corps Fellow?
Through the Science Corps Fellowship, I hope to contribute to this vision by making science more accessible, engaging, and meaningful. I see this opportunity as a pathway not only to share knowledge, but to ignite a love for learning and a spirit of discovery in others—as I continue to walk my own path of scientific growth and purpose.
In addition to your studies, please describe any prior experience that may help you as a Science Corps Fellow.
As part of the requirements for my PhD program, I began teaching in my second year and had the opportunity to lead a General Physics course—an experience I thoroughly enjoyed. For me, there is no greater gratification than sparking curiosity in students and watching their understanding deepen through discussion and exploration.
Beyond teaching, I actively contribute to outreach efforts as a member of the Outreach Committee, which organizes events in the local community to connect graduate students with neighborhood children through engaging conversations about science.
In terms of mentorship and leadership, I have served as Chair of the Mentorship Committee, and I've also been an Online Peer Mentor for incoming international graduate students at Northwestern University. These roles have

deepened my commitment to building supportive and inclusive academic communities. Most recently, I was appointed as a Graduate Resident Assistant, where I help manage residential life and organize programming for students living in graduate housing.

Where do you imagine yourself professionally in the future? Check all that apply.

Scientist in academia

In science education

In science outreach

Please expand on your selection above and describe where you imagine yourself professionally in the near (~2 year) and long-term (~10 year) future.

After completing my PhD, I aspire to pursue a career in academia. I've found that my drive to explore fundamental questions can truly flourish only within an academic environment. The intellectual freedom to ask, investigate, and share knowledge is what gives my work meaning. While industry offers other rewards, it is in teaching and research that I find true fulfillment.

Passing on knowledge—whether through teaching, mentoring, or outreach—is not just a passion for me; it is a responsibility. I believe science education begins long before university, in the early moments when a child's curiosity is first sparked. That's why I'm deeply interested in working to improve how science is taught in schools. It's at this formative stage that the seeds of wonder are sown, and it becomes our duty, as scientists, to nurture and protect those young shoots of curiosity.

I hope to collaborate with schools and teachers to ensure that science remains engaging, inclusive, and inquiry-driven. I also believe that the science we conduct in the lab can and should inspire the next generation—by showing them that dreaming, questioning, and experimenting are not just academic exercises, but essential parts of being human.
