

Apply to be a Science Corps Fellow - Entry #3369

Name
Eleana Karachaliou
Email
ekarachal@gmail.com
Gender
Female
Residence: City (State), Country
Panama City, Panama
Nationality
Hellenic
When did you or do you expect to complete your PhD?
I have successfully defended my PhD and will be graduating in October 2025
Please tell us briefly about your university education (institution, city, country, year)
PhD Biological Sciences, University of Manitoba, Winnipeg, Canada, 2025
MSc Systems Biology, Agricultural University of Athens, Athens, Hellenic Republic, 2019
Integrated BSc and MSc in Ichthyology and Aquatic Environment, University of Thessaly, Volos, Hellenic Republic, 2017
Why would you like to be a Science Corps Fellow?
I believe it is a scientist's duty to contribute to mentoring the next generation. I believe in training the next generation of scientists so they can become leaders in both their local communities and globally, contributing diverse worldviews and knowledge. This is essential for a future in which we are called to mitigate and adapt to climate change. Undertaking a Science Corps fellowship would help me build communication and teaching skills that will enable me to pursue the educational side of my field, gain more experience working in an international environment and expand my worldview. I believe that students should have the opportunity to connect with nature as part of their school curriculum and hope to offer students both work in the classroom and field as part of a real-life learning approach to the natural sciences. In choosing study organisms/systems as a teaching focus, I would be interested in researching what organisms and/or natural resources are of cultural value to the community I would be potentially teaching in, and which could be of use for addressing issues such as climate change mitigation, species conservation and food security in the area. Data science, coding and statistics are increasingly used in

science and other professional fields. I believe it is valuable for students to have access to these skills from an early age, and I would be excited to teach them.

In addition to your studies, please describe any prior experience that may help you as a Science Corps Fellow.

I have experience working in an international environment alongside people from different cultures, having undertaken an Erasmus exchange program in Austria (BOKU, Vienna), a GOOD-OARS-CLAP-COPAS summer school (La Serena, Chile), and a research visit with the Columbia River Inter-Tribal Fish Commission & Yakama Nation Fisheries in the USA (Portland OR & Toppenish WA). I also moved to Winnipeg, Canada to pursue a Ph.D. and to Panama City, Panama, to pursue an internship with UNEP. I have teaching experience that includes an Instructor position for the Principles of Ecology laboratory course at the University of Manitoba, the position of Teaching Assistant and Grader/Marker in Evolutionary Biology at the University of Manitoba, and spending a year working as an English Teaching Assistant at a bilingual school in Greece (Yellow Umbrellas Kindergarten, Athens). I also have good communication and presentation skills, having presented my work at both national and international conferences and seminars, as well as being an invited speaker at a workshop on the conservation of sea lamprey organized by the Swedish government. I have also participated in an interactive display at a community outreach event with Yakama Nation Fisheries (Prescott, WA, USA), where we handled and showed members of the community Pacific lamprey and provided information on efforts for their conservation.

Where do you imagine yourself professionally in the future? Check all that apply.

Scientist in academia

In science education

In science outreach

Other

Please expand on your selection above and describe where you imagine yourself professionally in the near (~2 year) and long-term (~10 year) future.

I have just finished my Ph.D. and am currently undertaking an internship as an Environmental Junior Analyst with the United Nations Environment Program (Latin America and the Caribbean Office) in the Science Policy Unit until October 31st 2025. In the near future, I aim to pursue a consultancy with an organization such as UNEP or FAO or undertake postdoctoral research. I would hope to undertake a Science Corps fellowship between finishing my internship and my next position. Long-term I hope to pursue a career that balances my scientific field of interest, Marine Biology, with environmental conservation and policy. I hope to achieve this through working with local communities and assisting them to address environmental/social issues of concern, while training the next generation of leaders and scientists. I would be interested in pursuing this through either academia, government, or non-government organizations.
