

Biochemist

SKILLS

Competences

- Protein purification and characterisation
- Mass spectrometry
- DNA modification in plasmids and bacteria
- Metal-organic catalysis
- Confocal and fluorescence microscopy
- In-vivo electrochemical and fluorescence
- biofilm tracking
- Cell culture and imaging
- Polymer coating and engineering

Languages

- German, *Native*
- English, *Proficient*
- French, *Intermediate*
- Swedish, *Beginner*

PERSONAL PROFILE

Biochemist with an educational background in chemistry. Achieved interdisciplinary experience in molecular biology and microbiology, applied medical sciences as well as materials science. Performed with international teams in universities and companies around Europe.

EDUCATION

ETH Doctor of Natural Sciences, PhD, Microbiology
Eidgenössische Technische Hochschule Zürich, 2021-current.

Doctoral studies in Molecular Microbiology, Prof. J. Piel:

- Lipo-Linker: a modular synthetic biology platform for customizable branched lipopeptides.

Master of Science, Chemistry

Albert-Ludwigs-Universität Freiburg, 2016-2019.

Master Thesis in Biochemistry, Prof. O. Einsle:

- Structural and functional analysis of the ABC-transporter NosDFY.
Co-author publication currently under review.

Bachelor of Science, Chemistry

Albert-Ludwigs-Universität Freiburg, 2013-2016.

Bachelor Thesis in Organic Chemistry, Prof. B. Breit:

- Rhodium-catalyzed cyclisation of allenes to 1,3-dicarbonyl compounds.
T. M. Beck, B. Breit, *Angew. Chem. Int. Ed.* **2017**, 56, 1903-1907.

EXPERIENCE

Karolinska Institutet, Stockholm (SE)

FEB 2020 – SEP 2020

Guest Researcher, Department of Neuroscience, Prof. A. Richter-Dahlfors:

- Developed anti-biofilm treatments in solid models for bacterial biofilm infections in foodstuff and clinical applications.
- Implemented new methods for biofilm detection via fluorescence and electrochemical methods.

F. X. Choong, J. A. Eckert *et al.*, *Biofilm*. **2021**, 3, 10060.

Albert-Ludwigs Universität, Freiburg (DE)

JUN 2019 – SEP 2019

Graduate Student Researcher, Institute of Biochemistry, Prof. O. Einsle:

- Completed membrane complex and soluble protein purification and analysis for nitrous oxide reductase and its complex maturation machinery
- Performed DNA modification including PCR, primer design and various cloning methods.

Heptagon (now: ams AG), Rüschlikon (CH)

JAN 2018 – MAR 2018

Intern, R&D Department:

- Worked in an international materials research team.
- Improved PDMS-based and epoxy resins and applied new coating techniques for Microoptics Sensing.
- Performed surface analysis via profilometry, AFM and drop-shape analysis.
