

Apply to be a Science Corps Fellow - Entry #3394

Name

Kishwar Iqbal

Email

kishwar.iqbal@chem.ox.ac.uk

Gender

Male

Residence: City (State), Country

Oxford, United Kingdom

Nationality

British

When did you or do you expect to complete your PhD?

January 2026

Please tell us briefly about your university education (institution, city, country, year)

University of Oxford

Ph.D., Physical and Theoretical Chemistry - Life Science focus (January 2026)

University of Durham

MSc, Physics and Chemistry (August 2020)

Why would you like to be a Science Corps Fellow?

I am deeply passionate about teaching, particularly as a tool for advancing equality, diversity, and social mobility. During my time at Exeter College, University of Oxford, I actively contributed to widening participation initiatives by mentoring students from disadvantaged backgrounds and leading workshops designed to demystify higher education. Working with some of the most underrepresented students in the country, I focused on showing them that they belong in leading academic institutions and can succeed there. Serving as both a mentor and a visible role model has been one of the most meaningful parts of my academic journey.

Alongside this, I am strongly motivated to make learning interactive, engaging, and relevant to the world students are entering. I am particularly interested in introducing modern scientific and technological concepts, including artificial intelligence, in an accessible way, so that students not only understand the science, but also feel empowered to apply it. As a Science Corps Fellow, I would be excited to combine my commitment to widening

participation with innovative, student-centred teaching to inspire confidence, curiosity, and ambition in the next generation of scientists.

In addition to your studies, please describe any prior experience that may help you as a Science Corps Fellow.

Alongside my academic work, I have extensive experience in teaching, mentoring, and science communication that I believe would directly support my role as a Science Corps Fellow. At Exeter College, University of Oxford, and partner institutions, I have worked as a mentor since 2020, delivering academic tutorials and workshops to students from diverse and often underrepresented backgrounds. I focus on highly interactive teaching methods, using demonstrations, discussion, and real-world examples to build confidence and engagement. Through one-to-one mentoring and small-group sessions, I have supported over 100 students, tailoring learning strategies to individual strengths and needs and contributing to average exam performance improvements of 10–20%.

In parallel, I am the founder and creator of an online scientific visualisation course aimed at helping students, academics, and professionals communicate complex ideas clearly and compellingly. The course focuses on data-driven storytelling and visual thinking, and has involved designing curriculum content, running pilot workshops, and building an early community of over 100 interested researchers. This experience has strengthened my ability to explain challenging scientific concepts in an accessible, engaging way, and to adapt teaching approaches for different audiences.

Together, these experiences have shaped my commitment to inclusive, student-centred education and would enable me to contribute effectively as a Science Corps Fellow.

Where do you imagine yourself professionally in the future? Check all that apply.

Scientist in academia
Doing science in industry
In science education

Please expand on your selection above and describe where you imagine yourself professionally in the near (~2 year) and long-term (~10 year) future.

My professional interests lie in education-focused entrepreneurship, particularly in creating inclusive, engaging learning experiences that broaden access to high-quality STEM education. In the near term (over the next two years), I want to build a deeper understanding of how impactful education programmes are designed, operated, and scaled sustainably, alongside continuing to work directly with students. Looking further ahead, I hope to lead or found initiatives that combine strong pedagogy with modern tools and technologies to improve educational access and outcomes for underrepresented groups. The culture and programme offered by Science Corps align closely with these goals, making it an ideal environment to develop both the practical and values-driven foundations for this path.
