Gender

☐

Male

☒

Female

☐

Non-Binary

Residence: City (State), Country *

Delhi, India

Nationality *

Indian

When did you or do you expect to complete your PhD? (month and year) *

August, 2025

Please indicate the university where you earned (or are currently pursuing) your PhD *

National Institute of Plant Genome Research, JNU

Why would you like to be a Science Corps Fellow? *

I have spent years pursuing research in plants science, however, my interests have always been varied. I have been curious to learn different aspects of science and research. In addition to that, I have always loved story-telling and describing my research in the form of stories and teaching, and training new students in lab. I would like to exercise that skill by being a Science Corps and find the joy and satisfaction of teaching and learning together.

In addition to your studies, please describe any prior experience that may help you as a Science *
Corps Fellow.

I have actively been involved in Training new batch of students in lab, I have taught school kids, though unofficially. Also, I have won several accolades for oral and poster presentations in India and Italy for my presentation skills. Beyond my scientific career so far, I have also been a powerlifting athlete, I have trained for several years and won gold and silver medals at the state-level competition. My love for research and strength- training has naturally propelled me towards helping people and teach them about benefits of strength training. While being a Science Corpse fellow would be a new experience, I am certain that my experience as a sports-person also brings an edge and would help expand the arc of training kids by the Science Corpse. I usually also, have a long list of books that I have read, or are waiting to be read at any given point; I am certain that my approach of learning together would be a mutualistic interaction in an ecology of students and teachers.

Where do you imagine yourself professionally in the future? Check all that apply. *

- ☐ Scientist in academia
- ☒ Doing science in industry
- ☐ Administrative role in industry or academia
- ☒ In science education
- ☒ In science outreach
- ☒ Other: Possibly building products that helps people eventually through my scientific training

Please expand on your selection above and describe where you imagine yourself professionally * in the near (~2 year) and long-term (~10 year) future.

I am currently employed as a Post-Doctoral fellow at NIPGR, New Delhi after doing a rigorous Ph.D. project that involved a large scale screening to identify a novel gene. Part of the project also involved method development.

The years spent during my training I also developed a flair for teaching, I feel it's one of the best ways to learn. While am currently entrenched in the academic scientific circuit, I want to venture into the world of product development, training, or management in the Scientific community. In the many academic, or Industrial conferences that I have attended, there is a lacuna of highly skilled professionals still not being able to deliver the focal point of their research or product. I aim to step into the training section of the scientific community, primarily the non-academic community. My first attempt would be to get an experience of training and education through being a Science Corpse Fellow, followed by management and research based roles in the industry. Many companies fail at getting a successful product, despite having a strong technical base, due to a lack of a bridge between the academia and industry. In the next ten-years I hope to fill that gap by bringing an academic's perspective into the non-academic sector.

How did you find out about Science Corps? *

- ☐ An email list in your institution
- ☐ A post on a job-site
- ☐ An entry in a post-doc search resource (e.g., ecoejobs.net)
- ☒ Referred by a previous fellow
- ☐ Referred by a friend/colleague/supervisor in academia
- ☐ Other:
